FY2016 Preliminary Estimate for Gas Pipeline; AGDC;Oil and Gas Production Tax	Inc	4,900.0	0.0	0.0	4,900.0	0.0	0.0	0.0	0.0	0	0	0

An additional \$4,900.0 is requested along with the initial appropriation of \$8,986.7 to continue the State's participation on this project. As timelines, deliverables and development of project plans move forward, the North Slope Gas Commercialization Office expects to have a fully-staffed organization, capable of providing the necessary support to the Commissioners of the DNR and Department of Revenue (with Department of Law's assistance) to negotiate and execute contracts and agreements, and to begin to move into the Front End Engineering and Design (FEED) stage of the project.

The additional \$4,900.0 request is driven by the required FY2016 State of Alaska project activities and deliverables as specified in SB138. The main categories of budget increases are:

Personal Services - \$352.6 to hire one new State of Alaska Gasline Project Manager (10-#127) position (included in separate change record) and meet a reasonable vacancy factor. Equity participation in the AKLNG project, which is estimated to ultimately cost from 45 to 60 billion dollars, is a significant undertaking for the State that will require highly qualified and experienced personnel to manage. Currently, international expert contractors are helping manage the myriad of issues that are being negotiated and it is imperative that State employees are hired and trained in the complex business interactions through the project phases. The Gasline Project Manager will be one of the key state positions in this effort.

Travel - \$300.0 for additional participation in AK LNG project meetings with the Producers.

Contractual - \$4,247.4 to cover:

\$2,000.0 for Department of Law support for external resources needed to draft a large number of critical commercial agreements in FY2016 that will prepare the State to make a decision to move the project into the FEED stage;

\$500.0 for Department of Revenue for additional contracting support;

\$647.4 to allow for the hire of State of Alaska employees to train with and transition into the Project Manager positions now staffed by external consultants (allows both State employees and consultants to stay on the project while the consultants transition responsibility to State employees);

\$1,000.0 to cover additional consultant support for the AK LNG Midstream and Marketing project teams in DNR;

based on this scenario.

Budget

Personal services funding request includes 1 position added in FY2016 supplemental, and increased funding for 13 new positions to build in-house marketing capacity for the negotiation and participation in three joint venture marketing agreements and the future sale and disposition of the state's share of royalty and Tax-As-Gas. Travel funding request includes maintaining funding for in-state and out-of-state meetings and conferences and increased funding for anticipated out-of-state and out-of-country travel related to additional marketing outreach. Services funding request includes maintaining funding for the various expert consultants being used to support the state gas team to advance the AKLNG project into the FEED phase and increased funding primarily for additional legal services:

- \$6 million in legal support from the Department of Law via outside counsel to continue advancing the legal and regulatory AKLNG project work
- \$12 million for legal support from the Department of Law via outside counsel in anticipation of the state entering three separate joint venture marketing agreements, one with each of the three producers, which would require the state to support 50 percent of the legal support for each one of the ventures.

Commodities funding request anticipates the need for additional office equipment and furniture with the addition of 13 new positions.

This is a reduction to the initial budget request for the North Slope Gas (NSG) office for the advancement of an Alaska Liquefied Natural Gas (AKLNG) project.

Because critical commercial agreement negotiations are not advancing at the pace initially anticipated, the NSG office has reduced its initial request, specifically as it relates to marketing, to take a more focused approach moving forward. With the continued advancement towards a Front-End Engineering and Design (FEED) phase the state will continue negotiating and drafting critical commercial project agreements and will take a more focused approach on marketing negotiations. The state is actively evaluating the position it will take in regards to marketing

structure and what is appropriate and in the best interest of the state.

Personal services will be reduced by \$5,691.3 and the remaining funding will include one position added in FY2016 special session supplemental appropriation and funding for three new positions to build in-house marketing capacity for the negotiation and participation in marketing agreements and the future sale and disposition of the state's share of royalty and Tax-as-Gas or TAG gas.

Retain one PCN from FY2016 Special Session and three PCNs from FY2017 Governor:

(10-#128) Market Analyst, range 25, Anchorage, Full-Time

(10-#130) AKLNG Sr Marketing Negotiator, range 27, Anchorage, Full-Time

(10-#133) Market Analyst, range 25, Anchorage, Full-Time

(10-#134) AKLNG Marketing Negotiator, range 27, Anchorage, Full-Time

Remove ten New PCNs from FY2017 Governor:

(10-#129) Market Analyst, range 25, Anchorage, Full-Time

(10-#131) AKLNG Sr Marketing Negotiator, range 27, Anchorage, Full-Time

(10-#132) AKLNG Sr Marketing Negotiator, range 27, Anchorage, Full-Time

(10-#135) AKLNG Marketing Negotiator, range 27, Anchorage, Full-Time

(10-#136) AKLNG Marketing Negotiator, range 27, Anchorage, Full-Time

(10-#137) Reservoir Engineer, range 27, Anchorage, Full-Time

(10-#138) Geoscientist, range 27, Anchorage, Full-Time

(10-#139) Reservoir Technician, range 25, Anchorage, Full-Time

(10-#140) Administrative Assistant I, range 12, Anchorage, Full-Time

(10-#141) Market Analyst, range 25, Anchorage, Full-Time

Travel funding will be reduced by \$300.0 and the remaining funding will provide for in-state and out-of-state meetings and conferences and for anticipated out-of-country travel related to additional marketing outreach activities.

Services funding will be reduced from \$18 million by \$1 million to \$17 million for marketing agreements. The remaining funding will provide for the continued support of the state gas team by various expert consultants for negotiating critical commercial agreements to advance the AKLNG project into the FEED phase and funding primarily for legal services:

-\$12 million in legal support from the Department of Law via outside counsel to continue advancing the legal and regulatory AKLNG project work, with a focus on commercial agreements.

-\$5 million in legal support from the Department of Law via outside counsel for the negotiation and drafting of joint venture marketing agreements with the Producers.

Commodities funding will be reduced by \$60.0 and the remaining funding will provide for additional office equipment and furniture for new positions.

FY2014 Restore Marketing of Statewide Resource	IncM	50.0	0.0	10.0	40.0	0.0	0.0	0.0	0.0	0) 0

Continuation funding is requested for a one-time item to support the marketing of statewide resource development initiatives.

The department is using the FY2013 funds for key initiatives to support natural resource development in Alaska. The primary focus of spending so far in the fiscal year has supported the administration's initiatives to 1.) commercialize the North Slope's world-class gas reserves, 2.) reverse the declining flow of oil through Trans-Alaska Pipeline System, and 3.) foster development of a strategic and critical minerals sector.

Examples include.

Development Initiatives

1.) Support for speaking engagements and extensive meetings in Japan and South Korea with representatives of major utilities, suppliers, and other potential Asian investors. The primary focus of these meetings was to explain the comparative advantages of Alaska LNG exports, with respect to other competing LNG projects around the world. Speaking engagements included:

the DNR Commissioner's presentation at the LNG Producer-Consumer Conference in Tokyo, a global conference at which government ministers, LNG producers and consumers discussed LNG issues and projects around the world

the Commissioner's presentation on Alaska gas and mineral opportunities at a reception hosted for Alaska by the U.S. Embassy in Tokyo. This event was attended by more than 70 business and government leaders.

During the Japan-South Korea trip, the state's message reached more than 1,000 company and government officials and resulted in multiple Asian companies arranging follow-up trips to Alaska to further explore opportunities to invest in Alaska.

- 2.) Advertising and securing of significant editorial space in the world's largest energy magazine (Oil and Gas Journal) to attract investment in Alaska's world-class hydrocarbon potential. The magazine's special report on Alaska will reach more than 300,000 readers worldwide in December. This special report will also be circulated at industry events in the Lower 48 and Asia. The report will educate potential investors on Alaska's future LNG prospects, the state's efforts to reverse the declining flow of oil through TAPS, and the opportunities for companies to invest in the state's enormous, untapped hydrocarbon resources.
- 3.) support for the 2013 Strategic and Critical Minerals Summit, which brings potential investors, explorers,

As activity related to the Alaska Gas Inducement Act (AGIA) escalates, the AGIA Coordinator (hired in January 2008) has identified specific positions needed in the AGIA Office to assure state and licensee compliance with the terms of the AGIA license, and to facilitate the complex permitting process, thereby assuring that the project moves forward without delay. Positions requested are:

Pipeline Engineer (PCN 10-#183) - Evaluate technical design, cost, and construction schedule, and understand the design basis for the project and the implications of alternative approaches

Habitat Biologist IV (PCN 10-#185) - Work with Alaska Dept of Fish and Game and U.S. Fish and Wildlife Service to analyze fish and wildlife habitat and populations and proposed studies, and integrate information into state and federal agency decisions.

This restores funds that have been one time items and will be used to cover costs associated with fulfilling the state's responsibilities as per the terms of the license agreement with TransCanada Alaska. Maintaining the state's current level of technical understanding and project support is essential to success. These funds would be used to retain outside experts and consultants for continued gas pipeline analysis including acquisition of baseline data, pipeline engineering (practices and analysis) and design, gas treatment plant design, engineering, and operation, cost overruns, enforcement, remedies, and off-ramps for the licensee and state as well as technical licensee

FY2011 OCS Lease Planning Mineral Management Service Agency Agreement FY11	Inc0TI	240.0	35.0	5.0	200.0	0.0	0.0	0.0	0.0	0	0	0

Over the next six years, the U.S. Minerals Management Service (MMS) will need to complete eight Environmental Impact Statements (EIS's) that will address the impacts of proposed outer continental shelf (OCS) oil and gas leasing and exploration activities in Alaska's offshore waters. The EIS's will address OCS leasing, exploration and development activities in the Chukchi and Beaufort Seas, Cook Inlet, and the North Aleutian Basin. This budget request will allow the state to be a participant in this process. Cooperating agency status will allow the State to partner with MMS in developing these EIS's, thereby ensuring that the concerns of Alaskans are better addressed. State agency expertise will be critical in assisting the MMS to ensure that these EIS's are completed in a timely and thorough manner.

A DNR Project Coordinator and state agency review team will participate in identifying and resolving significant environmental issues; assist in preparing portions of each EIS document; provide MMS an inventory of relevant information (e.g., GIS data, hardcopy and electronic datasets, maps, reports, etc.) that would be useful in identification and analysis of environmental data; provide data and rationale for analysis and assessment of alternatives; and participate with pertinent U.S. federal agencies such as the U.S. Corps of Engineers, U.S. Environmental Protection Agency, U.S. Fish and Wildlife Service, and National Marine Fisheries Service in review of and comment on National Environmental Policy Act (NEPA) process documents.

Funds included in this budget will be used to pay for personal service and travel expense in DNR's Office of Project Management and Permitting. The majority of the funds will be used to reimburse expenses of other participating state agencies including the Division of Mining, Land & Water, Division of Coastal and Ocean Management, Division of Oil and Gas, State Historic Preservation Office, and the Departments of Fish and Game, Law, Health and Social Services, and Environmental Conservation.

Over the next six years, the U.S. Bureau of Ocean Energy Management, Regulation and Enforcement (BOEMRE)(formerly the MMS) will need to complete eight Environmental Impact Statements (EIS's) that will address the impacts of proposed outer continental shelf (OCS) oil and gas leasing and exploration activities in Alaska's offshore waters. In addition, the US Bureau of Land Management is starting an EIS for future resource development in NPRA. The EISs will address OCS leasing, exploration and development activities in the Chukchi and Beaufort Seas, Cook Inlet, and the North Aleutian Basin, and onshore oil and gas leasing and other resource development in NPRA. This budget request will allow the state to be a participant in these processes. Cooperating agency status will allow the State to partner with BOEMRE and BLM in developing these EIS's, thereby ensuring that the concerns of Alaskans are better addressed. State agency expertise will be critical in assisting BOEMRE and BLM to ensure that these EIS's are completed in a timely and thorough manner.

A DNR Project Coordinator and state agency review team will participate in identifying and resolving significant environmental issues; assist in preparing portions of each EIS document; provide BOEMRE and BLM an inventory of relevant information (e.g., GIS data, hardcopy and electronic datasets, maps, reports, etc.) that would be useful in identification and analysis of environmental data; provide data and rationale for analysis and assessment of alternatives; and participate with pertinent U.S. federal agencies such as the U.S. Corps of Engineers, U.S. Environmental Protection Agency, U.S. Fish and Wildlife Service, and National Marine Fisheries Service in review of and comment on National Environmental Policy Act (NEPA) process documents.

Funds included in this budget will be used to pay for personal service and travel expense in DNR's Office of Project Management and Permitting. The majority of the funds will be used to reimburse expenses of other participating state agencies including the Division of Mining, Land & Water, Division of Coastal and Ocean Management, Division of Oil and Gas, Office of History and Archaeology, and the Departments of Fish and Game,

FY2014

Personal Services - DNR will receive interagency receipts from DEC to fund positions needed to assist DEC in its analysis of state assumption of the CWA Section 404 ("404 program"). The Office of Project Management and Permitting will require 2 new positions: one project coordinator to participate with DEC in the program development tasks, including the analysis of the division of duties between agencies under primacy and development of a mitigation program required of State programs; and one position for State program capacity development in wetlands jurisdictional determinations and permitting procedures. Capacity development will allow DNR to pursue development and administration of regional general permits for some classes of activities, resulting in more state control over 404 permitting during the interim period before the state obtains 404 primacy.

Environmental Conservation (DEC), the authority to take actions necessary to administer and enforce any dredge

and fill permitting program allowed under 33U.S.C. 1344 (sec. 404, Clean Water Act).

FY2015 LFD Reconciliation: Maintain Commodities - Regulation of Dredge and Fill Activities Ch12 SLA2013 (SB27) (continued)

Travel - Travel costs will be incurred for attending DEC work group and stakeholder meetings, meetings with EPA Region 10 and US Army Corps of Engineers Headquarters staff, and for staff training opportunities.

Services - Contractual costs will be incurred for hiring consultants to assist the state in designing regional general permits and other capacity building. The intent of this capacity building will be to improve the efficiency of 404 permitting in Alaska even prior to the state obtaining 404 primacy.

Commodities - Position support costs, including furniture and computers (one-time costs for new positions); standard office supplies.

FY2015

Personal Services - DNR will receive interagency receipts from DEC to fund positions needed to assist DEC in state assumption of the CWA Section 404 ("404 program"). The Office of Project Management and Permitting will require two additional positions to assist in State program capacity development in permitting procedures. The Project Coordinator will continue to help in the program development tasks, including development of a mitigation program required of State programs. Two positions established in FY2014. Two Natural Resource Specialist III (Anchorage, GG, Range 18C) \$97,108 each

1 0

The Office of Project Management and Permitting (OPMP) is experiencing an increase in requests to provide project coordination to oil and gas companies and projects via the Memorandum of Understanding (MOU) reimbursement model. The ability to accept these requests and funding agreements from industry is contingent on OPMP having enough project coordinators available.

In addition, OPMP has an increasing level of work being required for federal planning and initiatives (e.g., Resource Management Plans, Rapid Eco Regional Assessments, Refuge Plans). Because large project coordinators are typically funded by private sector applicants, a separate source of funding is required to cover the function.

This funding will allow the OPMP to add one new project coordinator to meet workload demand, and assist with the federal resource planning. OPMP will accommodate the level of requests for oil and gas permit coordination services and participate and represent the State's interest on federal planning initiatives that might impact Alaska resource development.

Increased IA authorization is requested to allow Administrative Services to collect additional indirect charges from divisions to support ongoing operational costs. A portion of the increase is for personal services to reduce the vacancy factor to a more manageable level. The other line item increases are primarily to cover increased costs of "core services" which are charges we pay to other state agencies to cover their core services (Human Resources, Central Mail Room, AKSAS/AKPAY, Law Regulation Review, Labor ADA Coordinator, etc.). Other increases include postage and courier service fuel-related increases.

In the Governor's agency-wide effort to vacant positions were deleted, with the personal services funding shortfalls of the department deleted 20 vacant positions is reallocated between compariority initiatives.	e intent to utilize savings gener rother priority projects within th sitions across multiple compone	rated from the delet e department. ents. General fund	ted positions to fu I savings from the	und e deleted								

Prior to these funding transfers, personal services funding shortfalls existed in many components at a level that was not manageable without either a general fund increment, or a reduction of positions (most of which are filled) and a loss of service. Shortfalls are primarily a result of when employees receive merit increases, the cost is reflected in the personal services budget need, but the budget is not increased to cover the cost. The general expectation is that departments are responsible to cover merit increases through turnover and vacancies in a component, assuming that will generate savings to offset the merit increases. When components experience little turnover or have few vacant positions, there is no cost savings to cover the increases. The Governor's budget recognizes the need to cover these shortfalls by allowing for the transfer of savings between allocations.

General fund was reallocated as follows:
Commissioner's Office \$100.0
Administrative Services \$125.0
Information Resource Management \$269.2
Citizens' Advisory Commission on Federal Areas \$13.0
Parks Management & Access \$80.0
Gas Pipeline Project Office (\$223.4)
Petroleum Systems Integrity Office (\$281.2)
Forest Management & Development (\$82.6)

Moving a portion of operating costs from land disposal income fund (LDIF) to general fund (GF) continues the Department of Natural Resources' effort initiated last legislative session to assure the LDIF is sustainable in the long term and able to support actual land sale and disposal efforts.

Projections in 2011 showed the fund would become unsustainable for the long-term due to increased costs and appropriations from the fund and reduced revenues to the fund. The department is endeavoring to mitigate this depletion through various means such as delaying capital project expenditures funded from the LDIF, using other fund sources for general operations where appropriate, and requesting budget actions to replace some LDIF with general funds where the work being performed is for general state operations.

The Legislature supported these actions in FY2013 and approved operating budget fund source switches from LDIF to GF for general operations in the Oil and Gas Development component and the Office of Project Management and Permitting component. LDIF appropriations remained in the Division of Mining, Land and Water, and the Division of Agriculture, the two divisions that actually support land sale activities which generate revenue to the fund. In addition, LDIF appropriations remained in the Administrative Services (\$272.5), Information Resource Management (\$207.2), and the Public Information Center (\$75.9) components, all which are considered overhead and do not directly generate revenue to the fund. The intent was to re-evaluate the fund sustainability based on FY2013 projections and take additional actions if necessary. The next step towards ensuring fund sustainability would be to remove LDIF appropriations from the three remaining components not directly contributing to the LDIF revenue stream, which should potentially bring the fund closer to sustainability in FY2014.

activities, with increased savings in future fiscal years as the organization matures.

The remaining personal services authority will be used to fund a reimbursable services agreement with Shared Services of Alaska for the cost of services provided.

The Shared Services organizational structure provides back-office support for common administrative functions, allowing the agency to focus more closely on core mission responsibilities.

The Shared Services organization model will increase the quality and speed of service delivery, and increase client satisfaction while decreasing the overall cost to the department for performing these functions. This is achieved through a business structure focused on continuous process improvement that includes standardizing business processes and improving transaction cycle-times.

FY2006 DNR Enterprise Support - Increased Costs of Information Technology

Information Technology (IT) costs have risen as the department expands the suite of electronic products and services to DNR staff that yield performance gains for the public and the employees and higher quality decision making products. New and expanding areas for IT software licensing include use of geographic information systems to manage land and resources (ESRI Arc/GIS software costs, ENVI costs); document management systems to advance electronic permitting and streamlining of DNR business processes (Stellent Software maintenance costs to DOA and Mobius Software costs to DOA); computing security requirements to protect against viruses and other malware (Microsoft Security Update Software; state anti-virus software, Cisco Security Agent software); growth of Oracle database administration and applications following adoption of new state standards (DNR enterprise Oracle contract costs); and increased web related software to assure a consistent development environment for DNR programming staff (Cold fusion software, web trends software). Some software maintenance now requires purchase of upgrades. (Adobe desktop products, mainframe access software, many others.)

Centralized hardware and servers are used to deliver the shared software services. Demand has increased ~ 15% / year which raises maintenance and replacement costs. The DNR Enterprise Support budget carefully manages these resources to be a low cost provider (average server life exceeds 8 years at DNR), but funding at maintenance levels do not support the required DNR hardware infrastructure due to server growth.

This increment funding will be applied to the DNR Enterprise Support budget and will be used to save the state money by providing a centralized service to the DNR divisions for common computing needs. This minimizes cost increases by enforcing standards, assuring technology deployment solutions are managed at a department level to the extent practical, and minimizes costs associated with administration of contracts and IT procurements (vendors have single point of contact for DNR). The increment will also be applied to support the increased share of DNR Oracle database administration costs associated with the expanding role of this database within the department.

1061 CIP Rcpts (Other) 30.1 FY2013 Funding Redistribution from Agency-wide Position Deletions In the Governor's agency-wide effort to limit the growth of vacant positions were deleted, with the intent to utilize sav					0.0	0.0	0.0	0.0	0.0	0	0	0

The department deleted 20 vacant positions across multiple components. General fund savings from the deleted positions is reallocated between components to cover personal services funding shortfalls or other department priority initiatives.

Prior to these funding transfers, personal services funding shortfalls existed in many components at a level that was not manageable without either a general fund increment, or a reduction of positions (most of which are filled) and a loss of service. Shortfalls are primarily a result of when employees receive merit increases, the cost is reflected in the personal services budget need, but the budget is not increased to cover the cost. The general expectation is that departments are responsible to cover merit increases through turnover and vacancies in a component, assuming that will generate savings to offset the merit increases. When components experience little turnover or have few vacant positions, there is no cost savings to cover the increases. The Governor's budget recognizes the need to cover these shortfalls by allowing for the transfer of savings between allocations.

General fund was reallocated as follows: Commissioner's Office \$100.0 Administrative Services \$125.0 Information Resource Management \$269.2 Citizens' Advisory Commission on Federal Areas \$13.0 Parks Management & Access \$80.0 Gas Pipeline Project Office (\$223.4) Petroleum Systems Integrity Office (\$281.2) Forest Management & Development (\$82.6) 1004 Gen Fund (UGF) 269.2

In the Governor's agency-wide effort to limit the growth of state government (for both positions and funding), some vacant positions were deleted, with the intent to utilize savings generated from the deleted positions to fund personal services funding shortfalls or other priority projects within the department.

The department deleted 20 vacant positions across multiple components. General fund savings from the deleted positions is reallocated between components to cover personal services funding shortfalls or other department priority initiatives.

Prior to these funding transfers, personal services funding shortfalls existed in many components at a level that was not manageable without either a general fund increment, or a reduction of positions (most of which are filled) and a loss of service. Shortfalls are primarily a result of when employees receive merit increases, the cost is reflected in the personal services budget need, but the budget is not increased to cover the cost. The general expectation is that departments are responsible to cover merit increases through turnover and vacancies in a component, assuming that will generate savings to offset the merit increases. When components experience little turnover or have few vacant positions, there is no cost savings to cover the increases. The Governor's budget recognizes the need to cover these shortfalls by allowing for the transfer of savings between allocations.

General fund was reallocated as follows:
Commissioner's Office \$100.0
Administrative Services \$125.0
Information Resource Management \$269.2
Citizens' Advisory Commission on Federal Areas \$13.0
Parks Management & Access \$80.0
Gas Pipeline Project Office (\$223.4)

1156 Rcpt Svcs (DGF) 100.0												
FY2008 Increased operational costs for film processing, leases,	Inc	65.0	0.0	0.0	60.0	5.0	0.0	0.0	0.0	0	0	0
and computer chargebacks	=				23.0	3.0	·			,	-	-
Film Processing - \$40.0												

Film Processing - \$40.0

Film remains the accepted archival medium to preserve the public record. Film processing has increased significantly since the original contract for services was implemented. Where we used to pay \$6.50 per roll for processing charges we are now up to over \$17.00 per roll. Increases are anticipated up to 60% over what we pay currently with a new multi-year contract amount potentially exceeding \$70.0.

Building Leases - \$10.0

Market rate increases on our leased property are going up 6% or more annually.

Computer chargebacks - \$10.0

Recording records continue to be digitized and added to the database for public use and review. The more images available result in more frequent use of the mainframe resulting in added chargeback costs. Having images available statewide increases public access and has been very well received by our users.

Office Supplies and Delivery - \$5.0

Products not under contract award, and delivery charges associated with purchase and delivery to outlying locations including Bethel, Sitka, Ketchikan, Kodiak, Seward, Valdez continue to increase, and cannot be supported at the existing services levels without additional funding.

Administration & Support Services (continued)

Recorder's Office/Uniform Commercial Code (continued)
FY2018 Recorder's Office Consolidation and

Efficiencies (continued)

FY2017 continue the promotion of e-Recording and streamlining processes in the remaining offices (Anchorage, Fairbanks, Palmer, Juneau, and Kenai). This FY2018 reduction would result in the deletion of seven positions and the transfer of one to Anchorage, reducing the Kenai office from three to one, the Fairbanks office from five to three, the Palmer office from five to two, and the Juneau office from three to two.

An additional reduction of -217.0 is possible because replacement of expensive equipment (archive writers, plat scanner/copiers, high volume scanners, software, etc.) will take place in FY2017, and no large purchases are anticipated within the next five years. In addition, we are negotiating smaller lease spaces for offices as they are consolidated.

Impact to the public will be minimal as e-Recording is available statewide, mail-in recording continues to be available, and offices will be maintained in Kenai, Fairbanks, Juneau, and Palmer. Impact to the Recorder's Office will be heavier work volumes in Anchorage with fewer Recorders in the outlying offices to assist with any backlogs. The transfer of one position from Kenai to Anchorage will help address this concern.

The Recorder's Office maintains the permanent public record of filed documents related to security interests in personal property. Alaska statutes and regulations govern the prices charged for recording. Revenue is a function of economic activity: sales of homes, purchases of personal property, etc., result in recording fees and state revenue. Annually, the Recorder's Office collects more in revenue than authorized to spend. Revenue in excess of authorization, as well as unspent authorization, returns to the general fund. The FY2018 proposed reduction should increase the revenue to the general fund if recording activity remains stable, as services can be delivered to Alaskans at a lower cost.

FY2014 Replace Land Disposal Income Fund to Help Ensure Long-Term Sustainability of the Fund	FndChg	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0

Moving a portion of operating costs from land disposal income fund (LDIF) to general fund (GF) continues the Department of Natural Resources' effort initiated last legislative session to assure the LDIF is sustainable in the long term and able to support actual land sale and disposal efforts.

Projections in 2011 showed the fund would become unsustainable for the long-term due to increased costs and appropriations from the fund and reduced revenues to the fund. The department is endeavoring to mitigate this depletion through various means such as delaying capital project expenditures funded from the LDIF, using other

89.5

20.0

978.6

The Division of Oil and Gas requests an increment of \$978.6 with four new positions: A petroleum geologist, a commercial analyst, a microcomputer technician I, and an accounting technician II.

At least four new positions are needed due to the dramatically increased workload associated with two major oil and gas initiatives. First, the gas pipeline initiative has dramatically increased the commercial section's workload. Second, the governor has taken the initiative to increase oil and gas production through the Division creating and disseminating geological data to explorers. \$544.6K

I. Gasline Commercialization: Commercial Analyst and Accounting Technician Positions
Activities leading to the development of an ANS gas pipeline have severely impacted the commercial section's resources. At the moment, nearly everyone in the commercial section has a full-time commitment to the gas pipeline process, either by way of analysis or participating in negotiations. These activities will likely continue through and beyond a gas pipeline start date. Even upon completion of a Stranded Gas Act contract, numerous complex commercial agreements related to the underlying Stranded Gas Act contract will need to be analyzed and negotiated. These agreements will be several years in development. Furthermore, the State may take an active role selling royalty in-kind gas; whether this activity is conducted within DNR or outsourced, commercial staff will be dedicated to its planning, implementation and conduct.

As a consequence of the overwhelming nature of the gas pipeline workload, several commercial initiatives are receiving less than optimum attention. Missed opportunities to market royalty in-kind and a potential weakness in dealing with royalty settlement reopeners have real revenue consequences to the state. The commercial section staffing level has improved with the addition of a Petroleum Investment Manager who brings to the division industry experience in gas trading and marketing. We also are trying to fill an Economist II position to support the Commercial Analysts by relieving them of the more tedious aspects of data analyses.

The Division requests a new Commercial Analyst position to provide upstream expertise (e.g., industry facility

sharing agreements and costs and upstream gas) and add negotiating depth to the staff for royalty oil and gas valuation and royalty in-kind sales. Currently, our upstream commercial expertise is being utilized in gas pipeline negotiations. Additionally, the Division requests a new accounting technician position for data input into the royalty accounting system and gasline data databases and models. Use of an accounting technician for data screening and entry will free up significant time of commercial staff, accountants, and auditors so they can spend more of their time in economic analysis and professional level work in support of negotiations.

II. Expanding Investment in Exploration: Petroleum Geologist and Microcomputer Technician
As was illustrated by the most recent North Slope and Beaufort Sea lease sales where ten independents but only
one major bid, the future of Alaska exploration will likely be dominated by smaller companies, many of whom are
new to Alaska. These companies need baseline geologic data that the state can provide through new research
and the compilation and publication of existing data.

If we are to continue attracting new companies to the state, baseline data from Cook Inlet and the North Slope foothills is needed, as is data from new areas such as the proposed lease sale area on the Alaska Peninsula. In order to accelerate and expand current efforts to create and provide this information the Division is requesting two new positions; a highly specialized petroleum geologist and a microcomputer technician.

The new petroleum geologist would focus on critical reservoir issues and must be an expert in petrographic analysis and basin analysis. The microcomputer technician is necessary in order to provide computer support on the Division's internal network which links interpretation workstations to seismic and well data bases used in subsurface oil and gas mapping and interpretation. The additional support is needed because the division is required to manage separate confidential and nonconfidential datasets so that research geologists can analyze and publish results from the nonconfidential data. In FY06, the division plans on moving a petroleum geologist to Fairbanks to work in conjunction with geologists of the State Geological Survey. The microtechnican will need to support the migration and maintenance of a subsurface interpretation work station in Fairbanks.

III. Full funding for Oil & Gas workload and staff

The Division's budget authority for personal services is 6.72% (\$558.2K) short of what is needed to fully pay for all authorized staff. With the legislatively approved pay increases for the Division's professional staff in 2004, the Division has been successful in retaining its highly-trained and experienced staff. With minimal turnover and the high demands on Division staff to quickly and efficiently serve the needs of gas pipeline negotiations and oil and gas exploration, development, and production; an 6.72% vacancy factor overstates both actual and desired vacancy rates. Ideally, the Division would operate with a 2% vacancy (\$166.1K), in which case it could maintain and perhaps increase the pace of lease issuance, permitting, unitization, and its pursuit of underpaid royalties. Industry supports the first three of these goals, and appreciates the early resolution of royalty disputes, if not the payment of incremental sums due.

Without this increment the Division has to make up the shortfall and could be required to lay off existing personnel and defer filling vacancies and any new positions. Having to make up the shortfall is an untenable situation where escalating demands are being placed on the Division and will further exacerbate delays in issuing leases, permitting, unitization, and pursuit of underpaid royalties. INC:\$392.1K

Introduction

Under the supplemental one-time funding provided in late FY05 and continued through FY06 we have hired staff to begin the missions outlined in the original request. Continuation of funding and retention of the staff are critical for the division to continue these missions. Required staff commitments and activities that will lead to the development of an Alaska North Slope (ANS) gas pipeline had severely impacted the division's resources and its ability to accomplish its day-to-day business. These gas line activities will last many years--until and beyond a gas pipeline start date. We anticipate that, even upon completion of a Stranded Gas Act (SGA) contract, commercial and technical staff will be assigned over the next years to develop various supplemental agreements with the SGA contract parties, such as gas accounting, audit, volume nomination and measurement protocols, gas balancing agreements and various pipeline and gas treatment plant limited liability corporation agreements. Furthermore, the State may take an active role selling royalty in-kind gas; whether this activity is conducted within DNR or outsourced, commercial and technical staff will be dedicated to its planning, implementation, and conduct. Retention of the staff associated with this request is critical for the division to accomplish its base missions and measures of: A) Encourage Exploration and Development; B) Maximize Benefits of Development and Production to the State; and C) Maximize Non-tax Revenue from State Oil and Gas Production; as well as to continue gas line related activities. Failure to fund the positions described below will result in much slower gas line negotiations, missed opportunities for new oil and gas revenue and an overall slower response to the division's day-to-day business activities.

Gas Line:

At the moment, nearly everyone in the commercial section as well as many other division staff have a full-time commitment to the gas pipeline process. As a consequence, several commercial and development initiatives are receiving less than optimum attention. Missed opportunities to market royalty in-kind and a potential weakness in dealing with royalty settlement reopeners and royalty reduction applications have real revenue consequences to the State. An experienced petroleum reservoir engineer will be hired and a petroleum land manager was hired to fill in the gaps left when existing staff were diverted to gasline work. We added two new Commercial Analyst positions that will supplement our upstream expertise (e.g., industry facility sharing agreements and costs, and upstream gas) and add negotiating depth to the staff for royalty oil and gas valuation, royalty relief applications,

Increased Workload (continued)

and royalty in-kind sales. A third Commercial Analyst position now supervises the Royalty Accounting section and, among his other duties, will ensure the RIK billing and analyses are completed accurately and on time. A programmer analyst is assisting in modeling efforts and data base construction.

Expanding Investment in Exploration and Development:

As was illustrated by the most recent North Slope and Beaufort Sea lease sales, where ten independents but only one major bid, the future of exploration will be dominated by smaller companies, many of whom are new to Alaska. These companies need baseline geologic data that the State can provide through new research and the compilation and publication of existing data. This data is needed in Cook Inlet and the North Slope foothills as well as in new areas such as the proposed lease sale area for the Alaska Peninsula. In order to accelerate and expand current efforts to create and provide this information, the Division has added four new positions: two highly specialized petroleum geologists, a geophysicist, and a programmer analyst. The petroleum geologist will focus on critical reservoir issues and must be an expert in petrographic analysis and basin analysis. The programmer analyst is necessary in order to provide computer support on the division's internal network which links interpretation workstations to seismic and well data bases used in subsurface oil and gas mapping and interpretation. The additional support is needed because of the requirement for the division to manage separate confidential and nonconfidential datasets so that research staff can analyze and publish results from the nonconfidential data. In FY06, the division plans on moving a petroleum geologist and a geologist to Fairbanks to work in conjunction with geologists of the State Geological Survey. The programmer analyst will need to support the migration and maintenance of a subsurface interpretation work station in Fairbanks. Two Natural Resource Specialists were added to supplement the lease sales, licensing and permit compliance effort. These two positions are primarily necessary to avoid unnecessary delays in the permitting of oil and gas activities proposed by new explorers. These positions will also increase the division's capacity to monitor and inspect new and existing oil and gas operations, as identified in our management measures. In addition, a publications specialist will assist with drafting and editing division documents, especially those related to gas and the gasline.

Summary of Activities and Missions:

- A. Increasing oil & gas investment and production by new and existing companies:
- 1. Encouraging the maximum use and sharing of existing infrastructure with new entrants
- 2. Encouraging the development and use of new or alternate exploration and development technologies to lower costs, accelerate activity and decrease environmental impact
- 3. Planning and designing for new infrastructure to support exploration and development in frontier areas (such as regional staging areas, roads and pipelines)
- 4. Development and publication of technical data on geology, engineering, economic and regulatory structure to support and recruit new investors and accelerate exploration.
- B. Ongoing North Slope gas pipeline analysis, negotiation, and project development/implementation:
- 1. Analyze and model fiscal systems proposed by project applicants or developed by the State.
- 2. Analyze fiscal impacts and risk/reward profile of delivery point, gas treatment, gas transportation, and gas balancing proposals for royalty in-kind gas.
- 3. Negotiate with multiple parties some with both upstream and midstream project interests, and some with only upstream or midstream project interests.
- 4. Provide staff support, analysis, and data for administration officials, and analysis and data for the Legislature.
- 5. Analyze marketing and valuation options for gas liquids associated with the project.

Introduction:

The Department of Natural Resources received authority to audit oil and gas royalties and net profit share lease (NPSL) payments under a legislative amendment effective July 1, 2003. AS 38.05.036. The Department of Revenue previously had such audit authority, in addition to auditing taxes paid by oil and gas producers. When DNR received audit authority a number of royalty and NPSL audits were not current. Although the Division of Oil and Gas, Audit Section, has subsequently reduced the number of audits that are behind schedule, a significant number of large, complex audits remain. The division would be able to perform audits more quickly to become current, and stay current, if it hires two additional auditors. The amount of royalty revenues at stake justifies the requested positions. This increment supports one of our division's end results - "Maximize Non-tax Revenue from State Oil and Gas Production".

In FY04, approximately 75 percent of the state's revenues (excluding investment and federal revenues) came from the oil and gas industry in the amount of approximately \$2.4 billion. Of that amount, about \$1.42 billion came from oil and gas royalties (59 percent of the total oil and gas revenues), with the rest coming from various oil and gas taxes. Division of Oil and Gas auditors are responsible for auditing, analyzing or reviewing in some manner virtually all of the royalties collected, either directly through audits or through review and negotiations during periodic amendments to royalty settlement agreements (called reopeners in the case of agreements with the three major oil producers on the North Slope). Thus, division auditors are responsible for verifying or reviewing the state's largest component of revenue (excluding federal and investment revenues).

Besides state audits, the Audit Section is also responsible for auditing all federal oil and gas leases in Alaska, under a delegation of authority and contract with the U.S. Minerals Management Service. The State of Alaska receives up to 90 percent of federal royalties, depending on the location of the lease.

Proposed additions to audit staff:

The two new auditors would be in Oil and Gas Revenue Auditor I-III flex positions (Ranges 16/18/20). The Audit Section needs two additional auditors to catch up on old audits and stay current on state oil and gas audits. Several North Slope audits are substantially behind schedule, including NPSL and marine transportation audits. Both NPSL and marine transportation audits involve complex issues, require examination of voluminous accounting and financial records, may include examination of \$200-\$300 million of costs per year, and by their nature take a significant amount of time to complete. Based on past experience, these audits can each result in millions of dollars of audit recoveries to the state.

Introduction:

Under the supplemental one-time funding provided in late FY05 and continued through FY06 we have hired staff to begin the missions outlined in the original request. Continuation of funding and retention of the staff are critical for the division to continue these missions. Required staff commitments and activities that will lead to the development of an Alaska North Slope (ANS) gas pipeline had severely impacted the division's resources and its ability to accomplish its day-to-day business. These gas line activities will last many years--until and beyond a gas pipeline start date. We anticipate that, even upon completion of a Stranded Gas Act (SGA) contract, commercial and technical staff will be assigned over the next years to develop various supplemental agreements with the SGA

contract parties, such as gas accounting, audit, volume nomination and measurement protocols, gas balancing agreements and various pipeline and gas treatment plant limited liability corporation agreements. Furthermore, the State may take an active role selling royalty in-kind gas; whether this activity is conducted within DNR or outsourced, commercial and technical staff will be dedicated to its planning, implementation, and conduct. Retention of the staff associated with this request is critical for the division to accomplish its base missions and measures of: A) Encourage Exploration and Development; B) Maximize Benefits of Development and Production to the State; and C) Maximize Non-tax Revenue from State Oil and Gas Production; as well as to continue gas line related activities. Failure to fund the positions described below will result in much slower gas line negotiations, missed opportunities for new oil and gas revenue and an overall slower response to the division's day-to-day business activities.

Gas Line:

At the moment, nearly everyone in the commercial section as well as many other division staff have a full-time commitment to the gas pipeline process. As a consequence, several commercial and development initiatives are receiving less than optimum attention. Missed opportunities to market royalty in-kind and a potential weakness in dealing with royalty settlement reopeners and royalty reduction applications have real revenue consequences to the State. An experienced petroleum reservoir engineer will be hired and a petroleum land manager was hired to fill in the gaps left when existing staff were diverted to gasline work. We added two new Commercial Analyst positions that will supplement our upstream expertise (e.g., industry facility sharing agreements and costs, and upstream gas) and add negotiating depth to the staff for royalty oil and gas valuation, royalty relief applications, and royalty in-kind sales. A third Commercial Analyst position now supervises the Royalty Accounting section and, among his other duties, will ensure the RIK billing and analyses are completed accurately and on time. A programmer analyst is assisting in modeling efforts and data base construction.

Expanding Investment in Exploration and Development:

As was illustrated by the most recent North Slope and Beaufort Sea lease sales, where ten independents but only one major bid, the future of exploration will be dominated by smaller companies, many of whom are new to Alaska. These companies need baseline geologic data that the State can provide through new research and the compilation and publication of existing data. This data is needed in Cook Inlet and the North Slope foothills as well as in new areas such as the proposed lease sale area for the Alaska Peninsula. In order to accelerate and expand current efforts to create and provide this information, the Division has added four new positions: two highly specialized petroleum geologists, a geophysicist, and a programmer analyst. The petroleum geologist will focus on critical reservoir issues and must be an expert in petrographic analysis and basin analysis. The programmer analyst is necessary in order to provide computer support on the division's internal network which links interpretation workstations to seismic and well data bases used in subsurface oil and gas mapping and interpretation. The additional support is needed because of the requirement for the division to manage separate confidential and nonconfidential datasets so that research staff can analyze and publish results from the nonconfidential data. In FY06, the division plans on moving a petroleum geologist and a geologist to Fairbanks to work in conjunction with geologists of the State Geological Survey. The programmer analyst will need to support the migration and maintenance of a subsurface interpretation work station in Fairbanks. Two Natural Resource Specialists were added to supplement the lease sales, licensing and permit compliance effort. These two positions are primarily necessary to avoid unnecessary delays in the permitting of oil and gas activities proposed by new explorers. These positions will also increase the division's capacity to monitor and inspect new and existing oil and gas operations, as identified in our management measures. In addition, a publications specialist will assist

FY2007 Continuation of Oil & Gas and Gasline

Increased Workload (continued)

with drafting and editing division documents, especially those related to gas and the gasline.

Summary of Activities and Missions:

- A. Increasing oil & gas investment and production by new and existing companies:
- 1. Encouraging the maximum use and sharing of existing infrastructure with new entrants
- Encouraging the development and use of new or alternate exploration and development technologies to lower costs, accelerate activity and decrease environmental impact
- 3. Planning and designing for new infrastructure to support exploration and development in frontier areas (such as regional staging areas, roads and pipelines)
- 4. Development and publication of technical data on geology, engineering, economic and regulatory structure to support and recruit new investors and accelerate exploration.
- B. Ongoing North Slope gas pipeline analysis, negotiation, and project development/implementation:
- 1. Analyze and model fiscal systems proposed by project applicants or developed by the State.
- 2. Analyze fiscal impacts and risk/reward profile of delivery point, gas treatment, gas transportation, and gas balancing proposals for royalty in-kind gas.
- 3. Negotiate with multiple parties some with both upstream and midstream project interests, and some with only upstream or midstream project interests.
- 4. Provide staff support, analysis, and data for administration officials, and analysis and data for the Legislature.
- 5. Analyze marketing and valuation options for gas liquids associated with the project.
- 6. Provide information and comments to the Federal Energy Regulatory Commission concerning regulation of the gas pipeline.
- 7. Retain consultant and expert advice on gas line matters; manage contracts with consultants and experts.
- 8. Investigate potential for additional North Slope gas resources including gas hydrates location, ownership, resource size, and development options.
- 9. Develop appropriate LLC corporate governance structure for State ownership participation in pipelines and gas treatment plants, as well as, voting rights that protect State interests are a critical component.
- 10. Analyze downstream marketing costs and risks for royalty in-kind gas.
- 11. Analyze effects of gas sales on existing oil production reservoir modeling and simulation.
- 12. Develop expertise needed to participate in pipelines and gas treating facilities open seasons and make long term gas treating and shipping commitments.
- 13. Continue robust economic modeling of all project proposals including evaluation of risk/reward profiles.
- 14. Negotiate measurement, audit, and accounting protocols for a project.
- 15. Negotiate gas take in-kind protocols to describe volume nomination, day to day volume notification/accounting and both short term and long term imbalance procedures.
- 16. Analyze options for buying and selling gas in the field, at the inlet to a gas treating plant, and at the pipeline inlets.
- 17. Develop options to possibly convert net profit share lease interests to fixed royalty or sliding scale royalty lease interests.

One-time project funding for the positions listed below was approved through FY06 only. In order to support the ongoing efforts described above, the division is requesting ongoing full time funding for the following 13 positions:

- 1. Three Commercial Analysts (Anchorage, exempt, R26)
- 2. One Publications Specialist III (Anchorage, R19)

FY2008 Replace One-time Funding for Oil and Gas Workload Introduction:	Inc0TI	1,318.1	1,207.0	58.5	35.1	12.5	5.0	0.0	0.0	0	0	0

Under one-time funding provided in late FY05 and continued in FY06 and FY07 we have hired staff and undertaken the missions and activities to meet the Division of Oil & Gas additional workload requirements. Continuation of funding and, more importantly, retention of the staff are critical for the division to continue these missions. Required staff commitments and activities that will lead to the development of an Alaska North Slope (ANS) gas pipeline had severely impacted the division's resources and its ability to accomplish its day-to-day business. The new Petroleum Production Tax (PPT) adds to the division's workload in the near term as well as long term due to anticipated increases in industry exploration and development activity. The gas line activities will last many years--until and well beyond a gas pipeline contract and start of North Slope gas flow. We anticipate that, even upon completion of a Stranded Gas Act (SGA) contract, commercial and technical staff will be assigned over the next years to develop various supplemental agreements with the SGA contract parties, such as gas accounting, audit, volume nomination and measurement protocols, gas balancing agreements, and various pipeline and gas treatment plant LLC agreements. The state may take an active role selling royalty in-kind gas; whether this activity is conducted within DNR or outsourced, commercial and technical staff will be dedicated to its planning, implementation, and conduct. In the near term, division staff are assessing the impacts of PPT on existing commercial agreements and incorporating the PPT into the economic modeling and other processes that will be used in future commercial negotiations. Retention of the staff associated with this request is critical for the division to accomplish its base missions and measures as well as continue gas line-related activities. Twelve division staff are funded through this increment. In addition to the ongoing gas line-related activities, staff funded in this increment work on lease sales, lease administration, unitization, resource evaluation, IT, and permitting/compliance. Failure to fund the positions described below will result in much slower, less productive gas line negotiations, missed opportunities for new oil and gas revenue, and an overall slower response in the division's day-to-day business activities.

Increased Workload:

Through early FY07 most of the commercial section as well as many other division staff have significant

FY2008 Replace One-time Funding for Oil and Gas Workload (continued)

commitments preparing for increased oil and gas exploration and development resulting from the new PPT and the ongoing gas pipeline process. Prior to this increment starting in FY05, several commercial and development initiatives were receiving less than optimum attention. Missed opportunities to market royalty in-kind and a potential weakness in dealing with royalty settlement reopeners and royalty reduction applications have real revenue consequences to the state. The commercial section staffing level has improved with the addition of a Petroleum Investment Manager who brings to the division industry experience in gas trading and marketing and a commercial analyst who brings oil and gas royalty and analytical expertise. An experienced petroleum engineer and a petroleum land manager were hired to fill in the gaps left when existing staff were diverted to gas line work. In order to relieve the Commercial Analysts of the more tedious aspects of data analyses, an Economist II position was filled. A new Commercial Analyst position was added to supplement our upstream expertise (e.g., industry facility sharing agreements and costs and upstream gas) and add negotiating depth to the staff for royalty oil and gas valuation and royalty in-kind sales. A programmer/analyst is assisting in modeling efforts and database construction. The staff are essential to continue the division's mission.

Expanding Investment in Exploration and Development:

As was illustrated in recent North Slope, Beaufort Sea, and Cook Inlet lease sales, the future of exploration in Alaska will be dominated more and more by smaller companies, many of whom are new to Alaska. These companies need baseline geologic data that the state can provide through new research, field work, and the compilation and publication of existing data. This data is needed in Cook Inlet and the North Slope foothills as well as in new areas, such as the new lease sale area for the Alaska Peninsula. In order to accelerate and expand current efforts to create and provide this information, the division has added three new positions: two highly specialized petroleum geologists and a geophysicist. The petroleum geologist's focus on critical reservoir issues and are experts in petrographic analysis and basin analysis. Two natural resource specialists were added to supplement the lease sales, licensing, and permit compliance effort. New best interest findings are coming due for the four legacy areawide lease sales and they require a significant staff commitment to research, write and publish. Unitization-related work has not diminished as new entrants begin exploring and existing units progress toward development and production.

Summary of Activities and Missions:

- A. Increasing oil and gas investment and production by new and existing companies:
- 1. Encouraging the maximum use and sharing of existing infrastructure with new entrants.
- 2. Encouraging the development and use of new or alternate exploration and development technologies to lower costs, accelerate activity, and decrease environmental impact.
- 3. Planning and designing for new infrastructure to support exploration and development in frontier areas (such as regional staging areas, roads, and pipelines).
- 4. Development and publication of technical data on geology, engineering, economic, and regulatory structure to support and recruit new investors and accelerate exploration.
- B. Ongoing North Slope gas pipeline analysis, negotiation, and project development/implementation:
- 1. Analyze and model fiscal systems proposed by project applicants or developed by the state.
- 2. Analyze fiscal impacts and risk/reward profile of delivery point, gas treatment, gas transportation, and gas balancing proposals for royalty in-kind gas.

FY2008 Replace One-time Funding for Oil and

Gas Workload (continued)

- 3. Negotiate with multiple parties, some with both upstream and midstream project interests, and some with only upstream or midstream project interests.
- 4. Provide staff support, analysis and data for administration officials and analysis and data for the legislature.
- 5. Analyze marketing and valuation options for gas liquids associated with the project.
- 6. Provide information and comments to the Federal Energy Regulatory Commission (FERC) concerning regulation of the gas pipeline.
- 7. Retain consultant and expert advice on gas line matters; manage contracts with consultants and experts.
- 8. Investigate potential for additional North Slope gas resources including gas hydrates-location, ownership, resource size, and development options.
- 9. Develop appropriate limited liability company (LLC) corporate governance structure for state ownership participation in pipelines and gas treatment plants-voting rights that protect state interests are a critical component.
- 10. Analyze downstream marketing options, costs, and risks for royalty in-kind gas.
- 11. Analyze effects of gas sales on existing oil production-reservoir modeling and simulation.
- 12. Develop expertise needed to participate in pipelines and gas treating facilities open seasons--make long-term gas treating and shipping commitments.
- 13. Continue robust economic modeling of all project proposals including evaluation of risk/reward profiles.
- 14. Negotiate measurement, audit, and accounting protocols for a project.
- 15. Negotiate gas take in-kind protocols to describe volume nomination, day-to-day volume notification/accounting and both short-term and long-term as imbalance procedures.
- 16. Analyze options for buying and selling gas in the field, at the inlet to a gas-treating plant, and at the pipeline inlets and outlets.
- 17. Develop options to possibly convert net profit share lease interests to fixed royalty or sliding scale royalty lease interests.

One-time project funding for the positions listed below was approved through FY05/FY06 and into FY07. In order to support the ongoing efforts described above, the division is requesting ongoing full-time funding for the following 12 positions:

- 1. Three Commercial Analysts (Anchorage exempt: R26) (10-Z009, 10-T007, 10-T010)
- 2. One Publications Specialist III (Anchorage GP:R19) (10-4242)
- 3. One Petroleum Reservoir Engineer (Anchorage exempt: R26) (10-X001)
- 4. Two Petroleum Geologists (Anchorage exempt: R26) (10-T008, 10-T009)
- 5. One Petroleum Geophysicist (Anchorage exempt: R26) (10-T011)
- 6. One Natural Resource Specialist IV (Anchorage GP: R21) (10-4244)
- 7. One Natural Resource Specialist III (Anchorage GP: R18) (10-4245)
- 8. One Petroleum Land Manager (Anchorage exempt: R26) (10-T003)
- 9. One Programmer Analyst IV (Anchorage GP: R20) (10-4247)

Currently, one of the three full-time funded Commercial Analysts and a quarter-time of the Publication Specialist III is funded through another funding source.

In 2009, Pacific Energy Resources Ltd. (PERL) abandoned Redoubt Unit as a result of bankruptcy. The bond, in the amount of \$6,600,000 along with interest earned, for abandonment liabilities for the Redoubt Unit between PERL and DNR. Division of Oil and Gas was transferred to DNR in October 2009.

The assets were purchased in December 2009 by Cook Inlet Energy (CIE). The remaining funds from the original bond will be used as a part of the new bond posted by CIE. This bond will be used toward abandonment and reclamation if CIE abandons the facilities or begins reclamation.

The original bond was held in an escrow account at First National Bank, where interest was earned on the principle. However, it cost over \$1,800/mo in bank fees to hold the money in escrow. The department would prefer to hold the bond in Treasury. Interest earnings on the bond would then require an annual appropriation to the bond.

DNR requests that the interest earned be applied to the bond. The earned interest would maximize the value of the bond funds available for abandonment and reclamation costs.

Interest earned is expected to be \$250,000 in fiscal year 2011. CIE will pay an estimated additional \$250,000 into the bond account.

Unless abandonment or reclamation occurs, all earned interest and bond funds will remain in the bond account. 1005 GF/Prgm (DGF) 250.0

In the review of personnel and associated functions, great care has been taken to ensure that opportunities for cross-function training and professional development are maximized in order to reduce the loss in capacity that will result from staff reductions and the related instability leading to attrition in the division. It is imperative that Division of Oil and Gas (DOG), like Department of Natural Resources (DNR) as a whole, retain its core expertise and ability to deliver on its mission of capturing maximum value for the people of Alaska from resource development while protecting the state's interest.

Personnel reductions will not reduce the work or programs for which the affected positions are responsible. Tasks performed across several sections will remain and must be absorbed by other fully engaged positions. Timely delivery of services could be affected, as will be the capacity to take on additional work requests outside the division's day-to-day workload.

These positions support best interest findings, lease sale preparations, public records requests, and public and

FY2018 Reverse Cook Inlet Energy Reclamation Bond Interest Sec19a Ch3 4SSLA2016 P78 L17 (HB256) (continued)

The assets were purchased in December 2009, by Cook Inlet Energy (CIE). The remaining funds from the original bond will be used as a part of the new bond posted by CIE. This bond will be used toward abandonment and reclamation if CIE abandons the facilities or begins reclamation.

The original bond was held in an escrow account at First National Bank, where interest was earned on the principle. It cost over \$1,800/mo in bank fees to hold the money in escrow. The department would prefer to hold the bond in Treasury. Interest earnings on the bond would then require an annual appropriation to the bond.

DNR requests that the interest earned be applied to the bond. The earned interest would maximize the value of the bond funds available for abandonment and reclamation costs.

\$150.0 is the estimate of interest to be earned on the bond for FY2017.

Unless abandonment or reclamation occurs, all earned interest and bond funds will remain in the bond account.

If funding is not received, interest earned on the bond held by Department of Revenue's Division of Treasury cannot be applied toward future bond requirements, imposing additional financial burden on this small and producing company.

Language

2009.

The interest earned during the fiscal year ending June 30, 2017, on the reclamation bond posted by Cook Inlet Energy for operation of an oil production platform in Cook Inlet under lease with the Department of Natural Resources, estimated to be \$150,000, is appropriated from interest held in the general fund to the Department of Natural Resources for the purpose of the bond for the fiscal years ending June 30, 2017, June 30, 2018, and June 30, 2019.

1217 NGF Earn (Other) -150.0

L FY2018 Restore Cook Inlet Energy Reclamation Bond Interest IncM 150.0 0.0 0.0 0.0 In 2009, Pacific Energy Resources Limited. (PERL) abandoned Redoubt Unit as a result of bankruptcy. The bond in the amount of \$6,600.0 along with interest earned for abandonment liabilities for the Redoubt Unit between PERL and Department of Natural Resources' (DNR) Division of Oil and Gas was transferred to DNR in October

The assets were purchased in December 2009, by Cook Inlet Energy (CIE). The remaining funds from the original bond will be used as a part of the new bond posted by CIE. This bond will be used toward abandonment and reclamation if CIE abandons the facilities or begins reclamation.

The original bond was held in an escrow account at First National Bank, where interest was earned on the principle. It cost over \$1,800/mo in bank fees to hold the money in escrow. The department would prefer to hold the bond in Treasury. Interest earnings on the bond would then require an annual appropriation to the bond.

DNR requests that the interest earned be applied to the bond. The earned interest would maximize the value of the bond funds available for abandonment and reclamation costs.

Petroleum Systems Integrity Office FY2008 Lease Monitoring and Engineering Integrity	Inc	1.475.1	1.211.5	79.7	46.1	111.0	26.8	0.0	0.0	10	0	0

This increment will continue the project initiated in the first quarter of FY07. It was not included in the FY07 operating budget as it is in direct response to the Prudhoe Bay Unit pipeline corrosion and production shut down incidents. The project is integral to the state's overall commitment to ensure the system integrity of oil and gas infrastructure. It will facilitate safe, reliable and more continuous oil and gas production and thereby help to maximize and stabilize revenues to the state. Based on the authorities and responsibilities of oil and gas leases, and pursuant to Administrative Order 229, the Division of Oil and Gas is implementing the Lease Monitoring and Engineering Integrity Coordinator's Office (LMEICO) as an expansion and enhancement of the state's existing permitting and compliance functions.

Specifically, the LMEICO will address oversight of petroleum facilities where regulatory gaps exist, and will address engineering design, operational procedures, maintenance and corrosion prevention programs, and quality assurance (QA) programs for all oil and gas units/leases. A regulatory gap analysis will be performed first, to enable quick focus on infrastructure that has not previously been subject to oversight, and to preclude any duplication of effort. Following the regulatory gap analysis and any resulting immediate actions required, the assessment of each unit/lease operator's quality assurance programs will proceed. The program's elements will be compared with technical, industry and performance standards, leading to a prioritized risk assessment of the various facilities, systems, operational and maintenance practices in each oil and gas unit/lease. Corrective actions will be required to address program gaps and weaknesses, both on paper and in the field, through documented inspections performed with the addition of inspectors to the Compliance function, expanding the division's field presence, and with the use of outside contract expertise, as necessary.

A similar function is currently performed by the State Pipeline Coordinator's Office (SPCO) of the Joint Pipeline Office, but is limited specifically to those pipelines located within state rights-of-way and authorized under AS 38.35, which currently consists of portions of 16 pipelines. The LMEICO initiative was implemented within the Division of Oil and Gas to address the far broader scope of all oil and gas facilities and related operation and maintenance practices and procedures on state oil and gas leases. The Plan of Operation approval process used by the Division of Oil and Gas additionally provides a vehicle for description and approval of all aspects of lease usage, and facilitates close coordination with other division functions concerned with Unit management, commercial considerations, royalty accounting, and others.

Administrative Order 229 directs designated agencies, the Departments of Natural Resources, Environmental Conservation, Fish and Game, Transportation and Public Facilities, Labor and Workforce Development, and Public Safety, to: appoint a liaison officer to coordinate all permitting, authorizations and oversight related to oil and gas production from state leases; to communicate regarding the oil and gas related permitting actions of their agencies and maintain related files; to coordinate public notices and public hearing processes; and to coordinate all permitting and compliance actions. Until the regulatory gap analysis is completed, the full extent of staffing

Oil & Gas (continued)

Petroleum Systems Integrity Office (continued)

FY2008 Lease Monitoring and Engineering Integrity (continued)

necessary to effect the LMEICO is unknown. In the interim, the Department of Natural Resources' Office of Habitat Management and Permitting, Office of Project Management and Permitting, and Division of Mining, Land and Water are requesting budgetary support for their agencies' Liaisons and associated costs. The Department of Environmental Conservation has identified an agency Liaison as well as the various positions and support costs required for implementation of new pipeline oversight regulations, for funding through the LMEICO. The Division of Oil and Gas has identified seven new positions, which form the core group which will assess the quality assurance programs of unit operators, perform risk analyses thereon, and ensure compliance with the approved QA programs through an increased field presence. The division has also identified three new positions to provide adequate administrative and technical support to the LMEICO.

Results to be achieved:

The first phase of the LMEICO implementation addresses the regulatory gap analysis is to be performed and completed in FY07, as well as the initial risk assessment for the Prudhoe Bay Unit. New positions identified for ANDR/Division of Oil and Gas are hired in FY07 subject to available funding.

In FY08, the second phase of implementation will proceed. Risk assessments will be performed on a unit-by-unit basis statewide. Phase Two implementation includes evaluation of proposed facility designs, operations and maintenance practices for technical competence and consistency with established government and industry standards. Implementation of the DEC regulations addressing gathering lines will proceed. Inspections of all facility types will be performed on an ongoing basis, documenting compliance with approved procedures and plans. Corrective actions will be ordered where required.

The third phase of implementation, post-FY08, would address the full-scale LMEIC Office, including compilation of a technical library as a repository for all oil and gas related permitting and compilance actions within the state, establishment within the LMEICO budget of all oil and gas related functions from the designated agencies, and establishment of a single location providing office space for all liaisons and support staff from the designated agencies, the whole of the Permitting and Compliance section of the Division of Oil and Gas, federal cooperating agencies, the Technical Library, and associated IT and administrative support.

Identification of new and continuing positions and associated budget, FY08 (Phase Two LMEICO):

A new office is being established with the Department of Natural Resources' (DNR) Division of Oil and Gas, the Lease Monitoring and Engineering Integrity Coordination Office (LMEICO). As part of this new coordination effort and in response to Administrative Order 229, the Designated Agencies are required to provide a liaison to work with this office. The DNR Division of Mining, Land and Water (ML&W), Office of Habitat Management and Permitting (OHMP), Office of Project Management and Permitting (OPMP) and the Department of Environmental Conservation (DEC) have identified associated positions and costs to support the LMEICO. Other Designated Agencies have not identified budgetary needs at this time.

The following agency budget requests are included in this change record as general fund, and appear in their respective budget components as Interagency receipts:

DNR ML&W - \$121.5 DNR OPMP - \$102.0 DNR OHMP - \$139.1 DNR Support Services -\$407.5 DEC - \$2,237.7 Total = \$3.007.8

DNR ML&W, OPMP, and OHMP:

The ML&W. OPMP and OHMP are responsible for many authorizations related to the exploration and development of oil and gas leases, including habitat and fish passage permits, reviews for consistency with the Alaska Coastal Management Plan, pipeline rights of way, other easements, permits, material sales and other associated leases. The new liaison positions, possibly established under FY07 supplemental requests, will coordinate all oil and gas authorizations statewide but not directly supervise the other Division or Office employees. Some of the duties include providing technical expertise to the LMEICO, performing some of the work necessary to process permits, gathering appropriate case files to share with the LMEICO, reviewing both internal and external cases, and coordinating efforts of existing divisional, office and regional staff. The liaisons will ensure the required coordination without slowing down existing authorization procedures; process some of the oil and gas authorizations; potentially create new regulations, orders, and procedures related to oil and gas authorizations; coordinate division and office participation on a multidisciplinary team regarding oil and gas projects requiring participation of experts such as geologists, economists, petroleum geophysicists, commercial analysts, environmental specialists, engineers, hydrologists and assistant attorneys general; resolve multi-agency conflicts or disputes; budget preparation; represent the department before the public, legislature and industry on highly technical issues impacting oil and gas exploration and commercial development; analyze comments and recommendations made by state, federal and local agencies, user groups, the public, and the oil and gas industry; balance competing interests and recommend resolution; respond to comments on behalf of the department and division; and negotiate permit conditions.

DEC OIL AND GAS INTEGRITY MANAGEMENT INITIATIVE:

Alaska is experiencing a significant increase in issues concerning integrity management of aging oil production and transportation infrastructure within the state. The number of spills from oil exploration and production facilities is increasing annually. As the average age of Alaska's pipelines and production facilities increases, maintenance

Numbers and Language

Agency: Department of Natural Resources

Trans Total Personal Capital
<u>Type Expenditure Services Travel Services Commodities Outlay Grants Misc PFT PPT T</u>

Oil & Gas (continued)

Petroleum Systems Integrity Office (continued)

FY2008 Other Agency/Division Participation in Lease Monitoring and Engineering Integrity (continued)

issues and oversight of system integrity becomes vitally important to ensure continued safe operation and to reduce the number and severity of oil spills. Aggressive oversight is also important to ensure that revenues from oil production not be reduced or stopped due to inadequate industry maintenance and operational processes.

Along with aging oil transportation infrastructure issues, oil exploration in Alaska is currently on an upswing, necessitating additional resources to accommodate additional facilities and new oilfield operators unfamiliar with state pollution control requirements.

DEC is not keeping pace with the current level of oil and gas activities in Alaska and cannot keep up with the expected increased level of oil and gas integrity issues or exploration and development activities.

Oil and gas facilities are not inspected for compliance with state environmental laws as thoroughly or as often as required to provide adequate oversight.

The aging oil production infrastructure requires additional oversight to maintain compliance with state requirements.

The cumulative impact of oil and gas waste discharges to the air, from the North Slope industrial operations, have not been monitored or measured to assess the aggregate potential harm to land, water, vegetation, wildlife and humans.

As new oilfield operators enter the state, significant compliance assistance is needed to make sure that state requirements are met.

There is little communication or collaboration with industry and concerned stakeholders on the planning and design of projects to minimize environmental problems and take advantage of opportunities to promote environmentally responsible development.

Much of the work carried out on the North Slope is made by contractors whose day to day activities are often not monitored or given departmental oversight due to the current lack of a full-time field presence of staff.

The oil and gas integrity management initiative funds new and enhanced services in the Divisions of Water, Air Quality, Spill Prevention and Response, and Environmental Health. Services fall in two areas:

- 1) inspection, monitoring and compliance and
- 2) environmental planning, design and consultation.
- 1) DEC INSPECTION, MONITORING AND COMPLIANCE:

ENVIRONMENTAL HEALTH

- Conduct inspections of solid waste units, including temporary storage facilities for drilling wastes and provide compliance assistance to North Slope facilities.
- Increase inspections for temporary storage, reserve pits, and grind-and-inject facilities.

Numbers and Language

Agency: Department of Natural Resources

Trans Total Personal Capital
<u>Type Expenditure Services Travel Services Commodities Outlay Grants Misc PFT PPT T</u>

Oil & Gas (continued)

Petroleum Systems Integrity Office (continued)

FY2008 Other Agency/Division Participation in Lease Monitoring and Engineering Integrity (continued)

WATER QUALITY

- Conduct water inspections and provide compliance assistance to North Slope facilities.
- Increase inspection rates for high priority wastewater discharges from 50% to 100%.
- Increase inspections for pad and road construction projects from 0% to 50% (approximately 50 projects).
- Conduct independent verification of effluent quality and verification of facility self-reporting on discharge monitoring reports.
- Evaluate ambient water quality through sampling and analyses.

SPILL PREVENTION AND RESPONSE

- Provide a continuous field presence to increase general oversight of all oil field operators including the numerous contractors currently employed by the oil companies.
- Increase the number of drills and exercises conducted to test and determine compliance with oil discharge prevention and contingency plans.
- Increase the number of on-site inspections conducted to determine compliance with discharge prevention.
- Increase inspections of regulated oil and gas facilities to ensure compliance with spill prevention requirements.
- Verify equipment and resources are available and ready in accordance with oil spill contingency plans.
- Increase technical oversight of operations and maintenance practices designed to prevent oil spills and unanticipated shutdowns.
- Investigate complaints on lack of proper oil and hazardous substance discharge prevention, preparedness, and cleanup.
- Increase on-site monitoring and oversight of cleanups and field responses to significant spills.
- Utilize third-party inspectors to assess leak detection and corrosion monitoring practices.
- Utilize third-party subject matter experts to assess and aid in correction of aging infrastructure-related problems.
- Conduct engineering review of pipeline corrosion management planning.
- Implement new regulations for oil flow lines.

FY2008 Other Agency/Division Participation in Lease Monitoring and Engineering Integrity (continued)

2) ENVIRONMENTAL PLANNING, DESIGN AND CONSULATION:

DEC will

- Work proactively to identify potential environmental and public health issues early in the lease sale planning process when changes can be most effective in preventing future pollution problems.
- Review plans and statements for lease sale plans to identify and avoid or mitigate potential air, land and water quality effects.
- Identify and resolve potential environmental and public health issues early when changes to project designs can be most effective in preventing future pollution problems.
- Review and prepare a single coordinated and consolidated response.
- Develop and implement assessments of the cumulative effects of oil and gas activities on Alaska's environment.
- Increase its participation with stakeholder workgroups to resolve.

ENVIRONMENTAL HEALTH

- Complete review and evaluation of plans for solid waste storage facilities. Plans include engineering plans and specifications, operations plans, and closure plans, including monitoring requirements.

WATER QUALITY

- Evaluate best available technologies to reduce waste quantity and toxicity.

SPILL PREVENTION AND RESPONSE

- Develop standardized technical manuals, scenario guidelines and assumptions.
- Provide technical assistance for contingency plan review.
- Provide full time, on-site technical assistance to industry and consultants.
- Develop educational materials and conduct stakeholder outreach.
- Establish minimum design and construction performance standards for oil spill prevention.
- Review oil and gas leases, plans of operation and EIS reviews to insure adequate measures are in place for spill prevention and response.

DEC COMPONENT-SPECIFIC INCREMENT SUMMARY:

The oil and gas integrity management initiative funds new and enhanced services in the Prevention and Emergency Response component as follows:

Petroleum Systems Integrity Office (continued)

FY2008 Other Agency/Division Participation in Lease Monitoring and Engineering Integrity (continued)

- Day-to-day presence of DEC personnel on the North Slope to ensure operations are conducted in a safe and environmentally sound manner.
- Increase in inspections and monitoring of the aging infrastructure.
- Increase inspections of spill response equipment.
- Increased monitoring of spill responses and cleanups.
- Increased monitoring of industry training and spill drills.
- Provides for immediate technical assistance.

The oil and gas integrity management initiative funds new and enhanced services in the Industry Preparedness and Pipeline Operations component as follows:

- Implement engineering evaluation and review of corrosion management programs for 1,500 miles of flowlines on the North Slope and Cook Inlet oil and gas fields which are subject to new state regulations.
- Implement and increase technical field inspections and compliance monitoring of new oil spill prevention requirements.
- Increase verification of response capability for exploration, production, and refinery facilities by 15%.
- Increase engineering support for design review of new flowline installations and leak detection systems for crude oil transmission pipelines.
- Complete specialized training requiring certification for inspection of pipelines and bulk fuel storage facilities.
- Conduct independent third party audits of corrosion management and other spill prevention requirements for regulated facilities to ensure integrity of oil and gas operations and protection of the environment.

The oil and gas integrity management initiative funds new and enhanced services in the Solid Waste component as follows:

- Increased inspections of solid waste facilities on the North Slope.
- Increased review and evaluation of plans for solid waste storage and disposal facilities.

Issue

HB4 created a new funding source ISPF-I/A.

The SPCO submitted a fiscal note for HB4 related to the mission of delivering natural gas from Alaska's North Slope to Fairbanks and Southcentral Alaska. In FY2016, SPCO will continue to coordinate the participation of DNR divisions and other agencies that did not submit fiscal notes, in pre-construction permitting and work associated with Alaska Gasline Development Corporation (AGDC) plan and process development. It is estimated the project will progress from pre-construction to construction phase in FY2016.

Estimated expenditures include contractual costs that will be managed by SPCO permanent employees either via Reimbursable Services Agreements (RSA) with other state entities, or through procurement of professional services.

SPCO anticipates, and included on the original fiscal note, a need for eight (8) long-term, non-permanent (LTNP) employees to assist with increased activities on the project.

Status Quo

SPCO would not have sufficient receipt authority to receive reimbursement for costs associated with performing its duties related to the Alaska Gasline Development Corporation (AGDC) Alaska Stand Alone Pipeline (ASAP). Activities and tasks that would not be performed, or would be significantly delayed include: coordinating the participation of other entities in pre-construction permitting and review processes; monitoring performance of field work by sub-agencies and contractors; providing technical expertise navigating federal and state requirements; and other work associated with the AGDC FY2016 work plan.

Accomplished With Prior Year Funding:

Per SPCO's mission, the office coordinated efforts of multiple agencies according to the FY2015 AGDC work plan, which included work from the following departments: Natural Resources, Environmental Conservation, Health & Social Services, Fish & Game, Public Safety, and Transportation. Additionally, the SPCO coordinated all permitting efforts for the project, to include numerous permits and authorizations from the above-listed agencies. Detailed work included initial efforts on the Supplemental Environmental Impact Statement (SEIS); moderation of regular meetings related to the applicant's geotechnical borehole and other field programs; management of the Health Impact Assessment (HIA) contract with an external vendor; and other tasks associated with managing and coordinating a large project.

FY2014 efforts on the project were coordinated by SPCO; however, SPCO was not directly funded -- its funding came through AGDC via Reimbursable Services Agreement (RSA). The \$911.0 RSA included funding for multiple agencies according to the FY2014 AGDC project work plan.

REQUEST

With the FY2012 one time increment of \$1,421.0 the division has begun the work necessary to accomplish all of the stated goals, recognizing that the goals would not be met in the first year. The division has initiated a multi-frontal attack on reducing the backlog and changing process and identifying other ways to keep from perpetuating the same problems that created the backlog in the first place. The increased funding for staffing is an absolutely essential component of this effort. In order to meet the goals, this work must be continued in FY2013 and beyond. The efficiency gains created through this increment would not be sustainable without the continuation of the positions and funding in this increment with the growing workload demand. Therefore this one time amendment needs to be converted into a base budget increment while still holding the division accountable to meet the goals.

ISSUE

The state's land base has increased by 8 million acres over the last five years, and the Division of Mining, Land and Water has not been able to keep up with the increasing number of applications to use this land. The division now has a backlog of over 2,300 applications.

This backlog of applications has been growing in recent years because the division has only been able to process 84% of all incoming applications. This is due to a number of reasons:

- Inefficient internal processes and cumbersome regulatory requirements.
- Land ownership patterns have become more complex, thereby increasing the conflicts that have to be resolved.
- Increasing federal and municipal regulation has increased the processing time for applications.
- Increasing appeals and litigation of our authorizations, which delay and complicate processing.
- An additional 8 million acres of land transferred to state ownership within the last five years, resulting in an increase in the number of applications to use that land.
- Insufficient staff to process the volume of work

FY2013 Improve Efficiency of Land and Water

Use Application Process (continued)

Through a combination of restructuring the permitting process, adding staff, and other measures the backlog will be significantly reduced, and eventually eliminated. At the same time efficiencies created through this effort will help to keep the division from slipping back into further backlog as the number of applications is expected to increase in future years.

BACKGROUND

The Division of Mining, Land and Water received a FY2012 one time increment of \$1,421.0 to eliminate a backlog of land and water use authorizations. The division worked with the Legislature to create a plan to reduce the backlog, change business processes for efficiency, look at statutes for revisions for efficiencies, and evaluate organizational structure. The funding allowed the division to fill five vacant positions and six new positions. The division has begun the work in earnest to meet all of the goals of this increment. The following efforts have been accomplished in FY2012 by November.

Hiring

Updated and in some cases reclassed 50 positions through Division of Personnel. This was the first step. The division had to first address the closure of DCOM in personnel transfers through bumping rights and then other reviews before initiating other hiring. Many staff devoted considerable time to fill positions, sometimes having to hire a few positions to fill one net position gain as people were promoted leaving other vacancies behind. Since July, the division hired 27 of 36 vacancies.

Training

Conducted new employee introductory training for 50 new employees. This lays the foundation information but is followed by more specific training for the new positions. Although new staff begin working on many tasks soon after hire, in many positions it may take up to a year for staff to gain full proficiency. Training comes from specific classes and from on the job training and informal sessions with managers.

Case Work

The scope of the backlog work had to be better identified for staff. DMLW worked with the Information Resource Management to segregate out the backlogged cases and create an efficient way to categorize, prioritize and assign case work. This system is in place and much of the case load has been categorized. During this effort, we have identified several problems in our case management system or in how we were using it that need to be fixed in order to accurately represent the work that needs to be done. We are cleaning up the errors and moving into either completing cases or closing them if appropriate. Staff are reviewing the backlogged files, determining the outstanding issues that need to be resolved or work completed to bring the cases to either issuance or closure. Cases are being assigned to specific adjudicators to work those files.

Work on IT solutions

The department has been working on various IT projects that will support staff in becoming more efficient.

Although there is separate funding for the IT projects, it does not cover the business staff time necessary to set requirements, work with developers and programmers, test products, train staff, and institute management change to roll out new products. Business staff is working on all of these efforts to create electronic case files, implement

Fire Suppression, Land & Water Resources (continued) Mining, Land & Water (continued)

FY2013 Improve Efficiency of Land and Water

Use Application Process (continued)

business process modeling, modifying case management system, establishing better reporting for transparency of business activities for staff and managers. Although this work takes staff time away from processing backlogged cases, it is essential to achieve long term goals of eliminating backlog, providing consistency and timely processing, and avoiding the trap of sliding back into the backlog situation. The department is evaluating a new type of business process management software and development methodology that will allow us to create an agile IT system that can be modified more easily to allow for continuous business improvement.

Clean up LAS

At the basis of our management and understanding of the backlog, the database needs to have accurate data. Without accurate data, reporting is incorrect, priority assignment is skewed, errors can be compounded in future work and the work effort will not be as effective. Staff is taking time to correct errors as they are discovered. This in turn may affect the numbers represented in the backlog.

Initiate Evaluation of business processes

The division is working to create a business analyst position that will lead our division through the business process scrub necessary to make the processes consistent, timely, and well coordinated. This work is critical to complete before some of the IT programming can be done. The division is also evaluating what activities that would require existing authorizations could be modified to be issued approval under general permits. This would save review time and allow that time to be devoted to other efforts.

Appeals

The department is evaluating potential changes to revise appeal standards and process in order to reduce the appeals that appear to be either frivolous or used as a tool to block development when the appeal does not have merit.

Identify statutory changes

The division has been evaluating and making suggested changes to statutes that will help create efficiencies, reduce time in process, free up staff time that can be applied to other work and clarify certain changes necessary to prevent further appeals and challenges that can delay projects.

Work with Departmental Permit Efficiency work group

The division is working closely with the Permit Efficiency Task Force established by the Commissioner's Office. In addition to the work listed above, the task force is working on other multi-agency coordination and federal permitting issues.

Contracting to create an expandable workforce

The division is reviewing the process used by DEC to develop a contract workforce that is available to work by task order assignment. The contractors essentially act like short term state employees, working under established protocols and conducting research and drafting decisions that would need to be approved by division employees. This would allow the department to have an applicant pay for extra staff work done through these contractors when the workload increases beyond our ability to issue authorizations within expected timelines. This effort looks promising but will take substantial work to institute and manage and may need revision of fee regulations and potentially statutes. The Division will continue the feasibility analysis.

Fire Suppression, Land & Water Resources (continued) Mining, Land & Water (continued)

FY2013 Improve Efficiency of Land and Water Use Application Process (continued)

At the beginning of FY2011, there was a backlog of approximately 2,300 applications that had not been issued. This included applications for permits (314), leases (297), easements (658), material sales (181), water rights (600), and instream flow reservation applications (330). At the end of FY2011 the backlog increased to 2,516 applications. The current backlog as of November 1, 2011 is 2,378 with a breakdown of permits (297), leases (292), easements (596), material sales (189), water rights (662), and instream flow reservation applications (342).

Even with the hiring efforts and other necessary work, the division was able to process 253 authorizations and close 93 cases within FY2012 up to November 1. This is more than were received in the same time period (208).

This work needs to continue in future years.

The backlog of applications range in complexity from very basic authorizations such as a commercial recreation permit that can be issued within a day, to large projects requiring multiple interrelated authorizations, multi-agency coordination, required studies and review that may take a few years to complete the authorizations. Each specific application may present an assortment of obstacles that can vary the processing times such as land ownership disputes, multiple use conflicts, business transaction delays, unresponsive applicant, encumbrance removal, project revisions, appeals and litigation.

The pdf document displayed through the following link contains the tables which show the applications received, quantity issued, and the backlog for each of these types of authorizations in FY2010, FY2011, and the first 1/3 of FY2012:

http://dnr.alaska.gov/mlw/elim/FY13-backlog-elim-tables-for-budget-increment-narrative.pdf

WORKPLAN

Goal: To timely process all incoming land and water use applications, and to eliminate the backlog.

Strategies:

- With the increased staffing, process 100% of all incoming applications (currently we can only process 84% of all incoming applications).
- The increased staffing, coupled with increased permitting efficiencies, will allow processing of at least 250 backlogged applications annually, with anticipated subsequent dramatic improvements through additional increased permitting efficiencies.
- The division will focus first on applications that foster economic and community development and improvement of state infrastructure, and provide opportunities for energy cost reduction, jobs, and contracts. Applications will be prioritized to work on projects that provide the most benefit to the highest number of Alaskans.

FY2013 Land Sales and Municipal Entitlements Staff Funding	IncM	105.0	90.0	10.0	0.0	5.0	0.0	0.0	0.0	0	0	0
for Southeast Alaska Region												

REQUEST

This request is to convert the FY2012 one time increment into the FY2013 base budget providing stable funding for the Southeast Regional Office to retain recently hire staff to adjudicate, in a timely manner, current requests for municipal land entitlements and continue the legislative mandate to offer land for sale to Alaskans under the land Disposal program.

BACKGROUND

This increment provides funds to maintain an existing previously unfunded position to perform essential work related to general land grant entitlements and implementation of the land disposal program within southeast Alaska.

One of the essential functions of the Southeast Regional Office is the adjudication of general land grant entitlements of the boroughs and unified municipalities in southeast Alaska and the implementation of the state land disposal program for the region. The southeast regional office is tasked with the responsibility of processing the municipal entitlements of the Haines and Wrangell Boroughs. Timely conveyance of these requests is crucial to sustaining the economic vitality of these communities and triggers economic growth and ultimately provides additional employment opportunities.

Previous budget shortfalls had caused the southeast region to leave vacant staff positions used to adjudicate municipal entitlements. Under circumstances existing in FY2011, municipal entitlement requests would have to wait on existing staff already charged with the: i) processing of leases, permits, and easements applications, and ii) monitoring activities on state owned land in southeast Alaska. This heavy workload did not allow for the timely conveyance of municipal entitlements. It is essential for the southeast regional office to maintain the individual currently on staff that is dedicated to adjudicating municipal entitlement requests that are far from routine and have a unique set of issues that must be resolved before coming up with an acceptable end product. With existing entitlement requests coming from Haines and the City and Borough of Wrangell and the pending application from the Petersburg area, it is imperative that the one time increment provided to fill this entitlement position be converted to the base budget so that these entitlement requests may be adjudicated consistent with statutorily mandated timeframes.

FY2	013 Oversight of Federal Land Transfers including Native	IncM	671.0	618.8	10.0	37.2	5.0	0.0	0.0	0.0	0	0	0

This request converts funding from the FY2012 one time increment into a FY2013 base budget to fund continued work related to oversight of federal land transfers. This includes:

- continue adjudication of 1906 Native Allotment reconveyances previously halted when federal funding was discontinued. This work was reinstated after receiving the FY2012 one time increment;
- allow DNR to continue to review of Alaska Native Claims Settlement Act (ANCSA) conveyances to protect public access and state ownership interests (including navigability) and 17(b) access
- review survey instructions issued by BLM for adherence to standards set forth in the MOU between the state and BLM regarding monumetation
- properly analyze state selection priorities to ensure best lands are selected to complete entitlement.

 Conversion of this increment from a one-time increment into the division's base budget is critical to protecting public access to public lands, protection of state title conveyed to the state at statehood, completing the task of reconveying Native Allotments on land erroneously conveyed to the state and reviewing remaining state selected lands to ensure the best economic development opportunities from the state's remaining entitlement.

BACKGROUND

REQUEST

Allotments, ANCSA Conveyances, and Survey Reviews

The FY2012 one time increment provided DMLW with sufficient funding to fill 5 previously vacant positions within the Realty Services Section that handle land conveyance issues and avoid eliminating 4 additional positions. Among the issues adjudicated by the group is the completion of the various land entitlements, review of land selection priorities and the reconveyance of lands subject to valid Native Allotment applications. Regarding Native Allotments, the state is obligated to adjudicate for reconveyance of 270 parcels of state land to the federal Bureau of Land Management (BLM) that were erroneously conveyed to the state. The state had suspended work on these reconveyances in FY2011 because of funding shortfalls. Each Native Allotment requires review for 3rd party interests that have been entered into during the time the state owned the land. Adjudication is also required to protect historic public access and title interests transferred to the state at statehood.

In addition to reconveyance of valid Native Allotment parcels, Realty Services handles the review of all ANCSA

FY2013 Oversight of Federal Land Transfers including Native Allotments, ANCSA

Conveyances, and Survey Reviews (continued)

land conveyance documents to ensure public access is protected and sufficient survey monumentation is set to adequately delineate ANCSA land from adjacent state land.

PROGRESS

- Native Allotments the Division has recently reconstituted the staff necessary to adjudicate these application files. We are aggressively identifying Native Allotment application where reconveyance is possible and developing an alternative parcel program with BLM and the BIA.
- Access the Division has reviewed over hundred conveyances to ANCSA Corporations to ensure that public access is maintained to public lands. In many cases 17(b) access has not been secured in the original conveyance document to the ANCSA corporations and these required modification prior to final conveyance. Lack of continued review of these ANCSA conveyance documents will increase the probability that access to public lands will be forfeited. Currently 10 documents a month are received from BLM that require review; 8 of those 10 documents require correction.
- Survey Instruction Review The MLW Survey Section determines whether land surveys are adequate under the requirement of AS 38.04.045 for land conveyances made by DNR. Where surveys are required, the Unit issues instructions to private sector land surveyors. The Unit serves as the watchdog for BLM surveys to insure that they meet required standards, and protect state's interests in areas such as navigable waters and existing easements.
- Land Entitlement Priorities this increment will continue the work on setting the state's priorities for land conveyances and relinquishments. In the past 5 years, the state has received an additional 8 million acres from the federal government. An additional 5 million acres are owed the state, but the state has far more selections remaining. Under federal law the state is allowed a 25% over-selection. This increment will allow the state to continue to identify lands for conveyance and relinquishment. If the state fails to do this work, decisions about relinquishment will be made by the federal government, rather than the state. During FY2011 the BLM was preparing to reject all prioritized selected lands that were in excess of the 125% of remaining entitlement with no input from the state. The affects of such an action by the BLM would have precluded the state from accepting title to the TAPS corridor or large portions of ANILCA withdrawn lands if and when their withdrawal was lifted. Areas important to the state that could be impacted include Fort Richardson and Fort Greeley.

Continued funding for positions to do this work reduces various inquiries from constituents, applicants, and other governmental agencies to legislators, the governor and commissioner by allowing the Division of Mining, Land and Water (MLW) to continue processing the Bureau of Land Management's native allotment reconveyance requests, ANCSA corporation conveyances and requests for the state to relinquishment selection of those areas affected by valid native allotment applications. Federal funding cuts for the BLM 2009 program effectively eliminated the ability to continue this work.

FY2013 Public Land Stewardship including Mine Permitting, Compliance and Assessment (continued)

positions must be continued in FY2013 and beyond. Therefore this one time amendment needs to be converted into a base budget increment while still holding the division accountable to meet the goals.

BACKGROUND

The FY2012 increment funded existing vacant, unfunded positions responsible for managing and permitting public use and private development on state lands and to fulfill more of the stewardship responsibilities given to this division. There has been an increase in economic activities on state lands due in part to the 8 million acre increase of state land received as our Statehood entitlement through the Accelerated land Transfer Act over the last five years. There has also been increased activity on all state land as a result of increased mineral exploration, new alternative energy projects, new telecommunications projects and an increase is public use of state lands.

One of the significant impacts from this increase of acreage under state management and increased economic development proposals on state land is the increase in lease and permit applications for use of state lands, both for economic development and recreational use. Many forms of economic development are controversial and require meticulous adjudication to address public, environmental and legal concerns. Rushed, non-comprehensive, adjudication leaves the state unable to adequately defend its decisions against legal challenges.

MLW has also seen a need for more rigorous permitting and oversight of mining activities. In the last five years there has been a dramatic rise in the number of placer mining operations, large scale metal mines, and large scale exploration programs. At the same time, public interest and concern about these activities has increased. DNR is defending more lawsuits regarding permits for mineral exploration. Increased on-site inspections at large mine projects are necessary to ensure permit compliance. The high volume of mining activities in 2011 resulted in permitting time for placer mining and mineral exploration activities of up to 6 weeks, far above the expected and desired time of 2-3 weeks. Timely and accurate processing and auditing is required to maximize mining revenues to the state. Increased travel costs have resulted in limited field inspections and technical assistance for miners.

Along with the increase in activities on state land the division has a constitutional and statutory responsibility to provide stewardship of these lands. Stewardship of state lands ranges from ensuring access for oil and gas development; to providing materials for infrastructure construction; to providing site- specific inspections of mineral development projects; and to interacting with the public where state lands are used for recreational purposes. Interaction with the public in areas of high recreational use consists of trash removal, providing public information (such as signage, web sites, maps), clearing timber and brush, or resolving damage and unauthorized use of state land. In areas of high use, such as the Rex trail in the interior, these funds could be used by the division to contract experts to develop prescriptive analysis to aid in trail rehabilitation.

Without continuing this increment, the Division of Mining, Land and Water (MLW) will continue to fall behind with the land stewardship responsibilities and will have the is workload conflict with the processing of applications from industry and individuals to use and develop state land. In FY2011, 84% of new applications were processed, but the backlog of unprocessed applications continues to increase and was 2,516 at the end of FY2011. The

FY2013 Public Land Stewardship including Mine Permitting, Compliance and Assessment (continued)

> increased pressure of the backlogged applications competes with the effort to address the many stewardship responsibilities of maintaining the land in a state ready for use and development. Both efforts are necessary.

PROGRESS

Much of the beginning of FY2012 was spent on hiring and training new staff along with many other efforts as part of the Improve Efficiency of Land and Water Use Application Process increment. In the midst of this effort, the division was able accomplish the following with this funding:

- Recruited and trained staff to fill the vacant positions.
- The division has increased its inspections of placer and hardrock permits
- The division has also increased frequency of inspections of large mines.
- Combined funding from this increment with a grant to do a trail rehabilitation prescription assessment and report for the Rex Trail.
- Held a successful Nome offshore mineral lease auction. Eighty-four lease tracts covering 23,793 acres were offered for sale, and all tracts were sold. High bids for all lease tracts totaled \$9.3 million. Increased oversight of the area during the summer was necessary to prepare for the lease.
- Finalized the Kasilof River Special Use Area and provided increased field inspections in the area during the summer fisherv
- Continued work to develop the Guide Services Concession Program
- Conducted inspections of many land and water authorizations
- Worked with businesses proposing use of new technologies on state land such as with the various hydrokinetic projects.

Along with the increase in activities on state land the division has a constitutional and statutory responsibility to provide stewardship of these lands. Stewardship of state lands ranges from ensuring access for oil and gas development; to providing materials for infrastructure construction; to providing site- specific inspections of mineral development projects; and to interacting with the public where state lands are used for recreational purposes. Interaction with the public in areas of high recreational use consists of trash removal, providing public information (such as signage, web sites, maps), clearing timber and brush, or resolving damage and unauthorized use of state land. In areas of high use, such as the Rex trail in the interior, these funds could be used by the division to contract experts to develop prescriptive analysis to aid in trail rehabilitation.

Five existing positions that were filled in FY2012 will continue to be funded by this base budget increment and used to provide the ongoing management and permitting responsibilities for public use and private development on state lands. In addition to personal services costs, this increment covers the travel (site-specific mining inspections and recreational use area management), services (such as contracts for trail rehabilitation) and commodities costs associated with managing the public and private uses of state land.

FY2013 Maintain Staffing for Permitting Initiative

The Division of Mining, Land and Water (DMLW) requests funding for the Navigability/Recordable Disclaimers of Interest (RDI) program which was primarily funded through federal grants that have now dried up with budget reductions at the Bureau of Land Management (BLM). This federal authorization was included in a language section of the budget as Sec19(b) CH41 SLA2010 -- and lapsed on June 30, 2012. No additional federal grant funding is available, and there is no-ongoing federal receipts in our operating budget to remove or "replace" with general Fund as a fund source change.

The continuation of the Navigability/RDI program is essential to defend state ownership of the submerged land under the navigable waters the state received at statehood.

The Recordable Disclaimers of Interest (RDI) program has successfully cleared clouds on the state's title to numerous navigable waters in Alaska. Currently, the State's RDI program is the only successful RDI program in the United States. It was implemented by DMLW's Public Access Assertion and Defense Unit (PAAD) and the BLM starting around 2006, with the help of a \$1,000.0 federal grant to support navigability research conducted initially by BLM researchers, but later delegated to DNR's Office of History and Archaeology (OHA) Section.

The funding has produced a volume of navigability reports issued upon agreed parameters which are sufficient for justifying applying for RDI's as well as a number of other inter-agency and inter-governmental management and policy decision uses. The focus to date of most of the navigability research has been in the Kuskokwim Basin because of the many systems of rivers and lakes used for transportation.

When the BLM and the State agree on navigability for travel, trade and commerce, the BLM will issue an RDI for that water body. When there is disagreement, a quiet title action must be filed.

The federal funding has been depleted to the point that only state support will keep the program viable. OHA staff attention and funding is now shifted away from preparing navigability reports to support RDI actions to supporting quiet title action litigation initiatives and title defense with RS 2477s and navigable waters with the funding received in FY2013.

Additional funding is needed to keep the RDI program viable as a much less expensive alternative to filing quiet title actions against the federal government. Successful navigable water litigation is expected to result in an increased interest in settling these cases without expensive litigation. Extensive title and historical research must be conducted on each water body to prove sufficient use and proper ownership before a RDI can be issued.

The Public Access Assertion and Defense Unit (PAAD) in Division of Mining, Land and Water is being eliminated. There are certain critical functions performed by this unit that will be preserved elsewhere in the division. Two positions (10-1725 and 10-1770) will be moved from the PAAD to other units within DMLW. This consolidation will substantially reduce cost, but will require many of the functions previously done by the PAAD to be absorbed or assisted by others, causing a somewhat reduced capacity for those other sections.

One of the critical functions that will be preserved in a reduced fashion is support to Department of Law (DOL) for existing multi-year lawsuits that are essential for establishing case law on Navigability and RS 2477 issues. Not completing these lawsuits that have been years in the making, will likely lead to erroneous case law precedent that will adversely affect future law suits, diminish state owned rights, and will increase future costs to the state and the public.

In eliminating the majority of the PAAD budget, the division will not be able to afford a \$255.0 RSA to Department of Law which has been provided each year for the purpose of funding an attorney dedicated to supporting RS2477 and other access issues. This will require the Department of Law to adjust and determine what they can complete within their given budget. There will also be a reduction of RSAs to Office of History and Archaeology, which funded three staff working on the litigation efforts.

Another preserved critical function is making navigability determinations that are essential for municipal entitlements, land sales, oil and gas leasing, pipelines, leases, and material sales to name a few. One of the positions (PCN 10-1725) that will be moved will carry this responsibility.

Functions such as reviewing all incoming federal conveyances and those to Native Corporations for ANCSA 17(b) and RS 2477 issues will have to be absorbed by others in Realty Services Section. The PAAD had a very effective

FY2016 AMD: Eliminate Public Access Assertion and Defense Unit (continued)

track record of winning cases filed with the Interior Board of Land Appeals regarding ANCSA 17(b) decisions. Not commenting and taking action at the appropriate time during the conveyance process will lead to the state missing one time opportunities to preserve public access.

The division will not be able to support efforts to obtain Recordable Disclaimers of Interest (RDIs) from BLM to clear cloud of title on navigable waters. That leaves only Quite Title Action to resolve these clouds of title, which are far more expensive than RDIs. There will be no research and application submissions, thus leaving the dispute of ownership of the beds to most water bodies in Alaska to some future effort. Without resolve, many property ownership disputes will continue to arise with mining, federal regulations, oil and gas leasing, or material extraction.

The Regional Land sections will have to absorb any of the RS 2477 and ANCSA 17(b) disputes and management efforts that will come up in the future.

Defense on any new lawsuits that are filed against the state regarding RS 2477s, Public Trust, or Navigability will have to be evaluated against available resources in the division and Department of Law. Likewise, consideration of filing any new lawsuits regarding RS 2477s, Public Trust, Navigability or even Federal Overreach will have to evaluate the ability of DOL to be successful with reduced staff support from DMLW.

Entire line item funding for the PAAD has been cut. Any RSAs for expert witnesses, historic research, and field research to support the preserved critical functions will have to be absorbed by the rest of the DMLW GF budget. This may mean less robust support for DOL in litigation as well as reduced travel, stewardship efforts, or case inspections in other sections.

The two positions that DMLW will also eliminate to offset the preservation of the two NRSIIIs from the PAAD come from the Realty Services Section and the IT Services Unit. Some management consolidation occurred in RSS to allow the PCN 10-1845 to be eliminated. GIS programming services have been reduced to eliminate PCN 10-1851.

The target audiences a	Inc formation	1,385.0 management sys			632.0	3.0	0.0	0.0	0.0	0	0	0

The overall project goals are:

- shorten and make consistent cycle times and processes for authorizations;

to other permit types, depending on resource availability.

- improve the permit application process for our customers by delivering interactive applications for authorizations that guide customers to the correct questions and help them to supply content;

state land and resources, and the public who apply for the use of these resources. The project automates easements, land use permits, material sales, leases, and water rights. Once we have this capacity we can expand

- build internal systems that support and improve DNR productivity allowing staff to increase time spent on critical land stewardship work; and
- scan active case files in order to provide structured access to all content within the DNR case management environment.

This operating increment will fund the final phase of the UP project, the build-out of the Water Rights processes,

FY2018 Unified Permit Program (continued)

and completion of the legacy scanning, and then transition into on-going operations and maintenance of the system. The Division of Mining, Land & Water (DMLW) generates revenue in excess of authorization from fees for the use of state land and resources. These fees will fund this effort, as they are directly linked to the project.

In FY2018 the remaining build out of the electronic business process management system will utilize three Program Coordinators (business process analysts) who work between end users and programmers to define and document the business processes and oversee the scan center, three Analyst/Programmers who implement the business processes in Microsoft .NET, and two Microfilm/Imaging Operators who will complete the scanning of legacy documents.

The remaining programming support will be supplied by outside contractors. Contractual services funding is also needed for licensing and support of the Content Management System (CMS), and the legacy scanning software and licenses.

DMLW now fully depends on the electronic case file systems for issuance of Land Use Permits and Easements. These systems have allowed DMLW to achieve high levels of consistency and accuracy in applying various stipulations across cases, as well as ensure the use of correct document templates. Individuals and businesses applying for Land Use Permits in different regions of the state can now expect the same process, while in the past there were many differences in how three land regional offices completed adjudication. By having an electronic system, less time is spent on the adjudication and more is spent on land stewardship.

Without funding to continue the project, adjudication of key DMLW authorizations will revert to or continue on paper, which will be less transparent and more difficult to manage, resulting in an increase of the adjudication backlog. Customers who have inconsistent guidance will submit incomplete paper applications for authorizations, delaying processing and issuance. Due to increased backlogs, revenue generation from uses of state land and water could be delayed and diminished, revenue recovery efforts will be manual and time-consuming, and economic activity in the state could be slowed due to permitting delays.

In FY2018 and FY2019 seven positions are funded from this project.

In FY2019 the budget will be reduced to \$1,139.7 by eliminating certain services.

FY2007 Statewide Forestry Inventory Program	Inc0TI	120.0	78.8	5.0	30.0	6.2	0.0	0.0	0.0	0	0	0

The DNR Division of Forestry (DOF), at the request of the Governor, is working to simultaneously sustain local mills in southeast Alaska, help support chipping operations and local mills in southcentral, and increase timber processing in interior Alaska. Success of these efforts requires quality statewide forest inventory information to provide the industry with sufficient information on timber quality and quantity to support financial analyses, and to assure Alaskans that state timber is managed sustainably. Existing inventory information is limited throughout the state, and nonexistent in some areas. The best information is available in the Tanana and Haines state forests, but even in these areas, inventory data has been acquired through sporadic special projects that become dated over time. Timber industry development and sound forest management require an ongoing timber inventory program to collect, analyze, and disseminate timber supply data.

As the amount of harvesting increases, the importance of accurately determining the annual allowable cut on a sustained yield basis increases. In southern southeast Alaska and the Mat-Su valley, the state now has markets for the full allowable cut of state timber. In interior Alaska, increasing interest in state timber is coinciding with decreases in available timber due to land status changes and wildfire. Inaccurate or out-of-date inventory information risks over-harvesting of state timber, which would violate our Constitutional and statutory mandates to manage for sustained yield. In the absence of accurate information, DNR must make conservative estimates of the allowable cut to minimize this risk.

DOF manages timber on approximately 20 million acres of forest land across the state. State forest resources are in a continual state of change due to harvesting, changes in land ownership, fire, and forest insects and diseases. Private investors require accurate information on public timber supply before making commitments to develop processing facilities in Alaska. Lack of accurate inventory is a roadblock to the Governor's initiatives to encourage private sector investment in timber processing in Alaska. A potential project in the interior is being hampered by a lack of inventory data.

This change record replaces the Investment Loss Trust Fund (ILTF) one-time funding source with General Fund money to ensure the continuation of the statewide forest inventory program. The program was initially funded with one-time funds from the Investment Loss Trust Fund (ILTF). However, this is an ongoing need for a fundamental part of the forest management program.

Inc

120.0

This initiative affects state-owned forested areas statewide, from southern southeast to interior Alaska.

The DNR Division of Forestry (DOF) is working to simultaneously sustain local mills in southeast Alaska, help support chipping operations and local mills in southcentral, and increase timber processing in the interior. Success of these efforts requires credible statewide forest inventory information to provide the industry with sufficient information on timber quality and quantity to support financial analyses, and to assure Alaskans that state timber is managed sustainably. Existing inventory information is limited throughout the state and nonexistent in some areas. The best information is available in the Tanana and Haines state forests, but even in these areas, inventory data has been acquired only periodically through special projects that become dated over time. Timber industry development and sound forest management require an ongoing timber inventory program to collect, analyze, and disseminate timber supply data.

As the amount of harvesting increases, the importance of accurately determining the annual allowable cut on a sustained yield basis increases. In southern southeast Alaska and the Mat-Su valley, the state now has markets for the full allowable cut of state timber. In interior Alaska, increasing interest in state timber is coinciding with decreases in available timber due to land status changes and wildfire. Inaccurate or out-of-date inventory information creates a risk of over-harvesting state timber, which would violate the Constitutional mandate to manage for sustained yield. In the absence of accurate information, DNR must make conservative estimates of the allowable cut to minimize this risk.

DOF manages timber on approximately 20 million acres of forest land across the state. State forest resources are

Lack of accurate inventory is a roadblock to private sector investment in timber processing in Alaska. A potential project in the interior is currently being hampered by a lack of inventory data. Establishment of an inventory program will benefit: - Existing and potential timber processors who depend on this information to make investment decisions, develop new products, and design new facilities. Loggers, truckers, and other support services associated with timber processors also benefit as the timber industry grows. - State and other land managers who rely on inventory to ensure that forest resources are managed sustainably, and to identify opportunities for cooperative management initiatives among landowners. - Wildlife managers who can use this information to assess habitat value and identify opportunities for habitat - The general public who depend on the DNR to manage state forests sustainably. This increment directly supports the New Growth initiative to increase timber processing in interior Alaska, and the "Bridge Timber" initiative to support mills in southeast Alaska in the face of shortages in federal timber. It also supports expansion of timber processing in southcentral Alaska, including hardwood fiber operations. This initiative affects state-owned forested areas statewide, from southern southeast to interior Alaska. 1004 Gen Fund (UGF) FY2008 Economic Timber MOU with US Forest Service for Inc 100.0 71.0 18.0 8.0 3.0 0.0 0.0 1 -1 **Tongass Timber Sales** In FY06, the state and US Forest Service (USFS) signed a Memorandum of Understanding (MOU) for DNR to help improve the economic feasibility of USFS timber sales. In FY06, implementation of the MOU began, and it was extended through July 1, 2012. This change provides ongoing funding for continued implementation of the Economic Timber MOU. The southeast timber industry is on the verge of collapse due to the shortage of timber from the Tongass National Forest. The Tongass National Forest comprises the vast majority of SE timber land. Federal timber sales have

Forest. The Tongass National Forest comprises the vast majority of SE timber land. Federal timber sales have dwindled to a fraction of the level in previous decades. Even when federal timber sales survive public review processes and legal challenges, they are often designed in ways that are uneconomical to harvest, and many sales go unpurchased even when mills are in desperate need of timber. Economic alternatives are not fully incorporated into the early stages of the sale design and review.

In contrast, the DNR Division of Forestry (DOF) has an excellent track record of designing and offering economically feasible timber sales on state land. This is due primarily to the expertise and experience of the SE DOF forestry staff regarding the specific terrain, vegetation types, industry infrastructure, and transportation systems of southeast Alaska. To improve the feasibility of federal sales, the State of Alaska and USFS mutually agreed to involve the DOF in the USFS sale review process. DOF was charged with reviewing proposed sales, taking operating costs and constraints into consideration, and recommending economically feasible alternative designs for inclusion in the remainder of the planning process.

In FY06, DOF did a pilot test of the process, recommending alternatives for the Navy and Iyouktug timber sales in

This request supports private sector employment by providing a stable regulatory structure for the timber industry; ensuring continued access via existing forest roads; and through contracting for management of forest stand treatments and forest road maintenance. The increment has three emphasis areas, all contributing to these goals as follows:

Trans

Total

- 1. State Forest Road Maintenance. The Division of Forestry (DOF) manages approximately 400 miles of all season forest roads. This valuable road network supports forest management and was constructed incrementally over time, in most part through the sale of state timber, with road construction being an obligation of the timber purchaser. This increment supports a regular maintenance program to ensure these road assets meet statutory and regulatory standards and continue to be open to provide access to forest resources. Forest roads are required by Alaska statute and regulation to meet certain best management practices (BMPs) and there has been a noted decline in BMP compliance in recent years particularly in the Northern Region where increased public use adds to maintenance requirements. While the primary purpose of these roads are in support of forest management, many of these forest roads are also used by the public for firewood gathering, hunting, fishing, camping, hiking and other recreational pursuits. Some roads may require closure to public access if not adequately maintained to required standards.
- 2. Ongoing reforestation and pre-commercial thinning. Alaska law requires minimum reforestation requirements on state lands following harvest. This is in keeping with the mandate of the Alaska constitution to manage renewable resources in perpetuity. Reforestation backlog has been largely addressed in the past through occasional capital funding. This increment will support a regular program to plant trees and scarify to prepare seedbeds for natural regeneration following harvest to minimize further reforestation backlog. Reforestation is

FY2012 Forest Management and Best

Practices (continued)

most successful and less costly when completed promptly following timber harvest, before grass and brush vegetation becomes established. As with road maintenance, the bulk of reforestation requirements are embodied in timber sale contractual requirements, however personal use harvest and some commercially harvested or burned areas require supplemental scarification and/or planting.

In Southeast Alaska pre-commercial thinning can significantly enhance forest productivity. Close to 4,000 acres of State land have been harvested in Southern Southeast since 1997, and additional state forest lands were previously harvested under federal management prior to conveyance to the State. About 8,000 acres, or 25% of the state forest lands available for harvest in Southern Southeast, are in reproduction stage. Pre-commercial thinning can reduce the time it takes to produce merchantable saw timber by 20 years or more. This treatment also can improve habitat for Sitka blacktail deer by encouraging browse species on the forest floor. Once forest stands get older than 30 years pre-commercial thinning is no longer feasible. Pre-commercial thinning cannot be indefinitely deferred or this opportunity to enhance forest productivity will be lost.

3. Forest Resources and Practices Act (FRPA) implementation. The Alaska Forest Resources and Practices Act (FRPA) is designed to protect fish habitat and water quality while supporting economically feasible timber operations. The Board of Forestry emphasizes that effective implementation of the Act is an essential part of the State's efforts to ensure the survival of the timber industry in SE Alaska, and support growth of the timber sector in other parts of the state. Implementation maintains public confidence that public resources are adequately protected. This increment supporting FRPA work includes timely reviews of mandatory plans of operation for timber activities, field inspections, training for timber operators, enforcement actions, and compliance monitoring.

For the first three quarters of 2010, FRPA workload for private land harvest plan review is more than twice that of the entire 2009. This increase in activity is welcome news to the timber industry; however it presents challenges for DOF as funding for FRPA work is declining. FRPA has always been a state program, funded fully by state general funds until 1999, when some federal Clean Water Act section 319 funds became available to help pay a portion of the program. In years of declining GF budgets the federal funds kept the program operational. Interagency receipts from the Department of Environmental Conservation (DEC) of \$115.0 for FRPA implementation will be eliminated in FY12 due to federal Clean Water Act 319 funding reductions. This funding supports DOF field presence including travel costs and personnel services. \$85.0 from the Clean Water 319 funds have also supported state Fish and Game (ADFG) Habitat biologists in FRPA implementation, an important partner in FRPA program delivery, and these funds are also eliminated in FY12. General funds are required to maintain this state program and to maintain a strong field presence, which is critical to maintain best management practices on state and private forest lands in Alaska.

What is the impact of not approving this increment?

The inability to maintain forest roads may force some road closures in the Tanana Valley State Forest and Haines State Forest to avoid detrimental water quality impacts and violation of state Forest Practices statutes and regulations. Roads that are not currently active for commercial timber sales will be considered for closure, limiting access for Alaskans for personal use fuel wood and other recreational pursuits. The State's credibility as a regulator of forestry Best Management Practices will be compromised.

The reforestation backlog that in the past has been reduced through CIP funding will continue to grow, and reforestation costs on a per acre basis will be higher as competing vegetation takes hold with a less regular and

FY2012 Forest Management and Best

Practices (continued)

timely funding mechanism. The DOF credibility as a regulator of forestry Best Management Practices on private lands will be compromised by its inability to meet reforestation standards on state lands.

Fewer acres in the Southeast and Haines State Forests will be thinned, reducing benefits of increased annual allowable cut associated with shortened rotation period. The window of opportunity to complete pre-commercial thinning on backlog acres logged under Federal management will narrow, limiting forest productivity through the end of the next rotation. It will take longer for second generation timber stands to mature to a size acceptable to a retooled timber industry that can process smaller second growth timber

There will be a significant impact on program delivery as FRPA workload is increasing in a time of declining federal receipts. The public and commercial and sport fishing group's confidence that timber harvest can coexist with other forest-dependant resources will be compromised. The FRPA may no longer be viewed by stakeholders or Federal regulators as effective in meeting its stated intent to protect public water and habitat resources.

Program, services, and recipients affected by this funding:

- Public and commercial users of state forest lands in Tanana Valley, Matsu, Haines, Copper River, Kenai Peninsula and Southeast
- Contractors providing road maintenance, tree planting and pre-commercial thinning services.
- Private landowners (primarily ANCSA Corporations)
- Road construction and logging companies accustomed to a preventative FRPA program with field presence vs. a more punitive program
- Businesses depending on timber supply from State and private lands
- ADFG Habitat Division and DEC as partners in FRPA implementation
- Commercial, sport and subsistence fisheries that depend on appropriate habitat protections

In the Governor's agency-wide effort to limit the growth of state government (for both positions and funding), some vacant positions were deleted, with the intent to utilize savings generated from the deleted positions to fund personal services funding shortfalls or other priority projects within the department.

DNR deleted 20 vacant positions across multiple components. General fund savings from the deleted positions is reallocated between components to cover personal services funding shortfalls or other department priority initiatives.

Prior to these funding transfers, personal services funding shortfalls existed in many components at a level that

FY2007 Geologic Materials Center Operations-maintain and safeguard sample collection	Inc	50.0	0.0	0.0	50.0	0.0	0.0	0.0	0.0	0	0	0

The Geologic Materials Center (GMC) is an important repository of unique geologic information collected over the last 60 years from throughout the state. There are over eleven million feet of rock, drill-cuttings and core represented in the sample inventory that provides industry, government, and academia with information necessary to identify new areas of resource potential and maximize extraction in areas already under development. The facility is critically undersized, in poor condition, and in constant need of repair.

Valuable geologic material is continually being received at the facility and is currently being archived in donated metal shipping containers that have been retrofit to handle the necessary shelving. These portable trailers are unheated, have no internal or natural lighting, and put the rock core samples at risk of freeze-thaw cycles that could destroy their integrity. In addition, any exploration company that does not have its own archived core facility (currently only one company does), is forced to take large sample requests off-site in order to interpret and analyze the samples to help identify possible exploration targets. This puts the samples at great risk of damage and/or loss.

Because of the deteriorating facility condition and increased sample handling, the operating budget for the GMC has slowly increased to \$250,000 over the last few years. For the FY07 fiscal year, we project that GMC's operational costs will be approximately \$45,000 higher than budgeted in FY06. Although facing significant increases in sample acquisition/ processing, and maintenance of an aging and sorely inadequate facility, DGGS has managed to keep operating budget cost increases to a minimum through a number of innovative methods. Some of these methods include volunteerism, deferred building maintenance, purchase of used equipment, and minimal grounds maintenance.

The Alaska Oil & Gas Conservation Commission (AOGCC) is a constant source of new rock samples that the state requires from any exploration well drilled on state land. In FY04, AOGCC agreed to provide \$200,000 operational funding for GMC through industry receipts which allowed DGGS to continue operation without impacting the Fairbanks operating budget. In FY05, the AOGCC reduced that contribution to \$50,000 because of protests raised by the industry producers group, Alaska Oil and Gas Assocation.(AOGA). DGGS was successful in restoring \$100,000 GF monies in FY06, which allowed for continued full-time operation and limited maintenance, however, continues to defer much needed work and upgrade. This request of a \$50,000 GF increment will keep the total budgeted operating capital at \$250,000 and maintain the sample collection at a minimal state of repair.

The importance of safeguarding this collection for the future economic well being of the State of Alaska, and providing reasonable access to the unique data for resource explorationists, cannot be overstated. Failing to fund this facility at this minimal level will result in further disintegration of the facility, and the important collection it maintains. There are numerous examples of how modern analytical measurements made on single core have led to discovery of millions of barrels of oil. Further reducing access to this data set has the clear potential of costing

Over the last 5 years the Division of Geological & Geophysical Surveys (DGGS) has seen a dramatic increase in inquiries for information concerning the availability of developable geologic resources. For example, a new exploration company entrant in the Cook Inlet Basin spent \$1.214 million at the 2006 areawide sale as a partial result of new geologic information and marketing by DGGS personnel (see Petroleum News, Vol 11, No. 43, Pg. 9). A major challenge for Alaska is that, of the 156,000 square miles of state owned land, only about 10,000 square miles have been geologically mapped at a scale conducive to assessing the natural resources or geohazard risk. Even if half of the total state land area is ignored because of access issues, the state has detailed geologic knowledge on only about 13% of its prospective land allotment. Currently the rate of new mapping is about 1,000 square miles per year from all projects, both collaborative and solely DGGS. Clearly, a reduction in this acquisition rate would put Alaska further behind in its attempt to fully inventory its resource base.

It is essential for an owner of any naturally occurring resource to know the location and probable magnitude of any commodity they plan to use for future revenue. Only then can the owner make reasonable development decisions. For example, an uninformed owner relying on the developer of a poorly constrained resource to assess what is available for purchase is very poor business practice; potential purchasers will always present estimates to their own benefit, typically to the disadvantage of the uninformed owner. Additionally, a highly competitive international resource marketplace requires modern data, assessment, and promotion to attract investment.

To address this huge challenge, many collaborative projects have been developed to leverage state funds and accomplish DGGS's statutory mission of determining the resource potential of state land. Many of these collaborative programs are being dramatically reduced, or phased out completely due to federal budget deficits. Examples of this are the zeroing of the fossil fuels budget in the Department of Energy, alleviation of the solid minerals program at the Bureau of Land Management, and the 50% proposed budget cut for the U.S. Geological Survey minerals program, all of which have provided collaborative support for DGGS programs.

This loss of multiple funding sources puts DGGS in danger of significantly reducing the amount of product from core collaborative projects. It is important to note that complete loss of any core programs in DGGS would have significant affect on the state's ability to provide new high-resolution data in areas where it is needed.

An additional, largely unpredictable effect, results from the bumping rights employees have within the Geologist classification series. Because the Geologist series encompasses a wide range of vastly different expertise, many personnel are uniquely qualified to perform the duties of their position. However, because of bumping rights, a

FY2008 Funding source change to continue resource assessment at existing levels (continued)

layoff in one programmatic area will result in employees "bumping" into positions for which they do not have the required expertise. Consequently, even the programs that remain fully funded will suffer from loss of critical personnel.

This request is for a fund change of \$605,800 of uncollectable IA and CIP receipts (from federally funded programs through the University and our capital projects) to general funds, to enable the Geological Development component to fully meet its statutory mission of determining the potential of Alaskan land for production of metals, minerals, fuels, and geothermal resources and the potential geologic hazards to buildings, roads, bridges, and other structures (AS 41.08.020).

The following bullets outline the significant changes in results that DGGS would incur if this fund source change to general funds is not approved, and assuming no additional federal, nor other outside funding is identified nor secured for FY08 (which has been a reality for the last two federal fiscal years). DGGS is working with its federal partners and the Alaska congressional delegation to try and identify new funding for these federal programs.

The federal funding losses, in concert with increased field operation costs, would necessitate a reduction in force of at least three Project Managers (Geologist IV), one Advanced Professional Geologist (Geologist III), one Journey level geologist (Geologist II), and one Analyst Programmer. These reductions would have a significant effect on established missions and targets and would include:

Action-- Reduction in new published geologic maps from 1005 sq. mi. per year to 565 sq. mi.

Result- Potential loss of state income due to decrease in available data in lease sale areas and new exploration areas. Example: the State received \$1.268 million in bonus bids from 2005 Alaska Peninsula areawide lease sale following release of new geologic information from DGGS. Mapping project is federally funded and will lose funding in 2008

Action-- Reduction in new published geophysical mapping from 750 sq. mi. to 560 sq. mi.

Result- New high-resolution mapping will not be available for assessment of mineral resources on much state land open to mineral entry. The recent Pogo mine is being developed in one of the recently acquired geophysical areas and new claim activity in all program areas can be directly linked to new data.

Action-- Reduction in peer-reviewed scientific reports on resources from 6 to 4 peer-reviewed publications

Result- Interpretation of new data critical to resource assessment and hazards mitigation would not be available for regulators, planners and for attracting new industry.

Action-- Reduction in technical presentations on resource potential and geohazards risk from 10 to 5

Result- Significant loss of public exposure for attracting new industry (see Cook Inlet example above) and disseminating important new findings on state geology.

Provides long-term nonpermanent geologic staff required to implement this capital improvement project (CIP) funded initiative. This statewide project began in FY2013 to evaluate Alaska's potential for contributing to the domestic supply of minerals required to meet the nation's needs for military and civilian high-tech equipment and electronics. The primary goal is to acquire and publish essential new geologic, geochemical, and geophysical data throughout the state on rare-earth elements (REE) and other strategic and critical minerals (SCM). Skilled, professional geologists are necessary to successfully acquire the required data and information, and to produce that data in usable form to support the future resource development. If this request is not funded, insufficient geologic staff will be available to conduct the large CIP-funded project the governor and legislature are asking DGGS to do. This funding will allow for two positions, and to help cover other staff working on the project.

Federal indirect collections, from federal agencies for cooperative fire suppression support, will be used to fund a nonpermanent position.

Fire suppression costs are increasing and fire activity is occurring early in the year and is extending later into the summer. The state must ensure 1) obligations are estimated as fires occur, 2) funding declarations are based on sound information, 3) federal agencies' billing for support are reviewed for appropriateness of charges, and 4) its FEMA-eligible collections are maximized. This position is intended to be used by division and department financial management on an as-needed basis (estimated at half-time) as fire activity demands the requisite support of a position that has fire background, wildland fire logistics experience, and related financial expertise.

Federal indirect, collected as an interagency receipt RSA of federal funds from the Fire Suppression Activity Component, will be used to fund the fire suppression support activities to which the indirect is suited. Such activities include reporting costs of resources used during fire season, interfacing with fire management teams regarding resource utilization, managing the state's recovery for federally declared wildland fires under FEMA's

FY2008 Helicopter Contract Cost Increases for Existing Levels

Agency: Department of Natural Resources

Trans Tota1 Persona1 Capital Outlay | Type Expenditure Services Travel Services Commodities Grants Misc PFT PPT Fire Suppression, Land & Water Resources (continued) Fire Suppression Preparedness (continued) FY2007 State Fire Assistance Federal Funding-provides various coordinated efforts and activities for fire preparedness (continued) The US Forest Service provides financial assistance to states to deliver coordinated wildfire response, comply with national safety standards and training, make hazard assessments, and educate the public. Without federal funding and authority, the state's preparedness for wildland fires would be diminished. Prevention and preparedness (especially in the urban interface areas) are integral to keep wildland fires from occurring and to keep wildland fires small when they do occur. Presently, capital projects are being used to house some of Division of Forestry's federal grants. Now, with several years of funding history related to US Forest Service grants, the Preparedness Component is able to predict some future stable funding level for certain operating activities identified within the component, resulting in this increment request. This increment provides a more accurate portrayal of funding sources to the component and to the positions budgeted in the component. With this incremental authority positions previously funded within allowable vacancy rates, and formerly funded via unbudgeted RSAs, will more appropriately be identified as federally funded. (Although some grant projects are one-time efforts suited to capital projects, recurrent annual funding of some operating positions via grants should be reflected with the requisite federal funding authority in the component's operating budget.) 1002 Fed Rcpts (Fed) 160.0

The Division of Forestry helicopter fleet consists of four type 2 (medium) and two type 3 (light) helicopters. Along with fire engines, this fleet of rotary wing aircraft provides the backbone of the Division's response capability. Helicopters have been used in wildland fire suppression since they were first introduced into civilian airspace. They can transport firefighters quickly to the scene of a wildland fire, provide a platform for aerial reconnaissance, deploy water bucket to directly suppress the fire, and shuttle additional personnel, equipment and supplies to the fire. They provide these same services on large fires and are often the only feasible means of transportation to the fireline. The current configuration has medium helicopters stationed in Palmer, Fairbanks, Delta Junction and McGrath. The two light helicopters are stationed in Soldotna and Tok. This distribution allows the best default response capability for the Division's area of suppression responsibility, while still allowing movement of aircraft between geographic areas when warranted by either high fire danger or fire activity.

Helicopter costs have been increasing annually. Competition for the services they provide has increased due to increased oil, gas and mineral exploration in Alaska as well as increased off-shore support of the oil and gas industry in the Gulf Coast. The recovery work associated with Hurricanes Katrina and Rita has also contributed to a higher demand for contract helicopter services. Costs that vendors must pay for fuel and aviation insurance have also risen dramatically. All this has led to an increase of what it costs the Division of Forestry to maintain the availability of these vital resources. The Division of Forestry's four medium helicopters are procured under a five-year, annually renewable exclusive use contract. When the contract for the four medium helicopters was re-bid in the winter of 2005-06, the low bid for the contract was \$123.0 above what the Division paid for the same service for the 2005 fire season. It is expected that an even more significant increase will be seen in the re-bid of the contract for two light helicopters, which will occur in the second quarter of FY07. Based on similar awards in the Federal sector, an increase of \$103.8 above the current yearly contract costs for the two helicopters is

Fire Suppression, Land & Water Resources (continued) Fire Suppression Preparedness (continued)

FY2008 Fire Season Preparedness (continued)

April 1 - August 31st. Although the Division of Forestry has funding authority through the Fire Suppression Activity Component to allow the continuation of fire suppression activities in the fall, this component is primarily targeted at paying actual suppression costs of on-going fires. The Division of Forestry must still be prepared for fire activity throughout the period of time when fires can be expected. Recent years have shown that fire activity has also increased in the late summer and fall beyond the historic norm. The longer fire season requires that initial attack personnel, warehouse workers, dispatchers, and their supervisors be available for a minimum season of five months. This increment funds readiness, response and prevention of wildland fires throughout the fire season.

Extensive scientific documentation and media coverage exists on the impact Alaska is experiencing from climate change. According to one of many researchers with similar results, UAF Professor Terry Chapman has reported that Alaska's climate is warming more in the summer than previously thought. The increased warming is mostly due to an increase in the snow free season. The loss of snow cover leads to warmer soils and a longer growing season allowing for trees and shrubs to advance. Snow reflects solar radiation; trees and shrubs capture the sun's rays and redirect it into the local atmosphere as heat. Chapman's paper predicts a warming increase of two to seven times the current rate if trees and shrubs continue to spread.

Additionally, the Alaska Climate Research Center (ACRC) reports that the average temperature increase over the last 5 decades is 3.4 degrees F. For 2004, the ACRC also reports that locations across the state from the Southeast Panhandle to the Seward Peninsula had departures for the combined June, July, and August mean temperature ranging from 3.4 degrees to 5.0 degrees F above normal. Nome, Fairbanks, Anchorage, King Salmon, Valdez, and Juneau all experienced the warmest summer on record.

Some of the indications that these climatic changes are having a significant effect on the length and intensity of the fire season can be seen in recent fire statistics. Some of the more dramatic indicators include:

- March has averaged 16 fires for the last three years. This is eight times higher than the previous 10 year average.
- April has averaged 32 fires over the last three years.
- 2005 was the driest April in the Interior in 101 years.
- On average, in April, over 1500 acres have burned in the last three years. This is three times the average for the previous five years.
- From 1999 to 2000 the average acres burned in May has been 2,583 acres. The 2001-2006 average was over 30,000 acres
- Although for the 2006 fire season, the number of fires and acres was low compared to 2004 and 2005, Alaskan resources were critical in supporting the unprecedented fire season experienced in the western US and Canada.
- After August 1 in 2005 three million acres burned. Historically, a fire season ending weather event occurs in late July or early August.
- After August 1 in 2004 2.8 million acres burned.
- The Kenai Peninsula experienced a total of 19 lightning caused fires in 2005, where there were only a total of 25 from 1985 through 2004.
- Both the Kenai and Mat-Su valley had a record number of lightning strikes in 2005.
- During the last four fire seasons Alaska burned an area the size of Connecticut, Massachusetts and Rhode Island combined.

Alaska Statute 41.15.050 was amended in the last legislative session to read "the period from April 1 to August 31,

FY2008 Fire Season Preparedness (continued)

inclusive, of each year is designated the fire season". While this change mandated the Division of Forestry to be prepared to respond to fires earlier than it historically has, there was no provision to fully fund the range of fire preparedness activities that must be conducted throughout the period of expected fire activity. Historically, fires outside of the fire season have been suppressed by the permanent full time staff of the Division of Forestry. When the number or complexity of these fires exceed the ability of the permanent full time staff to handle, with increasing frequency as has occurred in recent years, seasonal firefighters must be called from seasonal leave directly to the fireline. 85% of the Division of Forestry's employees are seasonal. These seasonal firefighters comprise the primary workforce of the Division. Most work a four-month season which historically began about April 15. Calling in seasonal employees outside of their normal season creates a number of significant problems for the Division, not the least of which is compromising national training standards for safety and fitness.

The need for safety training and fitness testing have long been a part of the wildland firefighting profession, but it has only been in the last ten years that national standards have been developed and adopted profession-wide. This has been in response to wildland fire fatalities that occurred on such notable incidents as Storm King Mountain (Colorado - 14 fatalities), 30 Mile (Washington - 4 fatalities), and Cramer (Idaho - 2 fatalities). These standards, established by the National Wildland Fire Coordinating Group (NWCG), mandate that all wildland firefighters must complete a safety refresher course and demonstrate their fitness by successfully completing a work capacity test each year prior to responding to wildland fires. In addition, there are other professional mandates that require annual training in hazardous materials awareness, first aid, and blood borne pathogens. These same firefighters who must receive annual training are also the core cadre of instructors for providing the same training plus entry level wildland fire training to local fire department personnel and emergency firefighters, including those in remote villages. In addition to training there are many other duties that must be performed in advance of responding to fires and throughout the period that fires are likely to occur. Because fires are not a year-round activity and due to the seasonal nature of the workforce, each fire season requires considerable start-up. Preparing fire apparatus for fire readiness, preparing warehouse functionality, updating fire equipment inventories, getting dispatch offices and technical systems operational, preparing maps and other documents, ensuring helicopter and fixed wing aircraft contract compliance and fire readiness, and preparing equipment such as pumps and chainsaws for use on fire are just some of the required tasks.

There are other factors in addition to apparent climate change that contribute to the need for longer seasonal time for the Division's firefighters. Alaska is experiencing unprecedented growth into the wildlands, especially in areas along the railbelt. In the Mat-Su Borough for instance, the population has grown 57% since 1990 (Neal, Fried, Alaska Economic Trends), and growth at that rate is expected to the year 2013 (Alaska Dept. of Labor news release). With more homes and businesses being built in wildland areas, there are not only more values to be protected but there is a commensurate increase in the risk of human caused wildland fires. Therefore, fires that are occurring earlier are also more complex than they have been in the past and the potential threat of catastrophic loss is higher than it has ever been.

In Alaska, the fire season can generally be characterized by two sub-seasons. The early or spring season is characterized by dry, cured grass as the primary fuel that carries fire and most of the fire starts are caused by human activities. 84% of wildland fires in Alaska are human caused and 50% of the human caused fires occur prior to June 1. The later season is characterized by mature forest types, such as Black Spruce, being the carrier fuel and lightning being the predominant cause of ignitions. Although more acres are burned by these later fires, they typically don't pose the same degree of risk to human values in the wildland. Along with increased fire risk, earlier spring break-up coincides with an earlier construction season which leads to early land clearing and

A further complication of longer fire seasons is the Spruce E the fire danger in the Anchorage Bowl, on the Kenai Penins. There are 1.1 million acres of dead trees on the Kenai alone further adds to the complexity of fires occurring at any time. Fire Suppression, Land & Water Resources (continued) Fire Suppression Preparedness (continued)

FY2008 Upgrade Helicopter Capability (continued)

The Division of Forestry helicopter fleet currently consists of four type 2 (medium) and two type 3 (light) helicopters.

This increment would fund the increase in cost to contract for two medium helicopters in place of the light helicopters. This change to medium helicopters provides faster, more effective fire response.

On large fires, medium helicopters are the tool of choice for most missions. They can carry a significantly larger sling load, which is the primary method of transporting tools and supplies to the fireline. Their water bucket capacity makes them much more effective in direct fire suppression, and they can carry up to 9 people as compared to a maximum capacity of 4 for the light helicopters. Light helicopters are used primarily for aerial reconnaissance only on large fires.

Along with fire engines, this fleet of rotary wing aircraft provides the backbone of the Division's response capability. Helicopters have been used in wildland fire suppression since they were first introduced into civilian airspace. They can transport firefighters quickly to the scene of a wildland fire, provide a platform for aerial reconnaissance, coordinate communications between other responders such as local fire departments and State Troopers, deploy water buckets to directly suppress the fire, and shuttle additional personnel, equipment and supplies to the fire. They provide these same services on large fires and are often the only feasible means of transportation to the fireline. The current configuration has medium helicopters stationed in Palmer, Fairbanks, Delta Junction and McGrath. The two light helicopters are stationed in Soldotna and Tok. The light helicopter normally stationed in Tok is shared with the Copper River Area. The four medium and two light helicopters are all procured under five-year, annually renewable, exclusive use contracts.

Type 2 or "medium" helicopters are typically Bell model 205 and 212 helicopters. Normally configured for initial attack, they carry 4 firefighters, a 300 gal bucket, a portable pump, fire hose, a chainsaw, firefighting hand tools and enough gear to subsist the firefighters for three days. One standard type 2 helicopter load provides all the irrefighting and support capability for the majority of fires they are dispatched to. A typical response might be aerial reconnaissance of the fire scene upon arrival by the firefighter in charge, landing as near as possible to the fire, off-loading personnel and equipment, deploying the water bucket (which is carried internally in the helicopter up to that point), and dropping water on the fire with the bucket while the crew attacks the fire using hand tools and/or pump and hose. The type 3 or "light" helicopters are represented by Bell 206B, 206L, and Aerospatiale A-Star helicopters. A standard load consists of two fire fighters, a 100 gallon bucket, hand tools, and firefighter support gear. Payload does not normally include a pump, hose, or chainsaw. While these helicopters are also often the first unit to arrive on a fire scene, additional trips for more firefighters and gear is often necessary to allow for effective suppression. The additional trips delay deployment of the water bucket, which at 100 gallons has considerably less firefighting effectiveness than the 300 gallon bucket for the medium helicopter.

The need for upgrading the two light helicopter contracts to medium helicopters is not limited to increasing fire fighting effectiveness during initial attack of wildland fires. When the state experiences large fire seasons such as those in 2004 and 2005, the Division of Forestry must augment its helicopter fleet with additional aircraft. In recent years, competition for helicopters hired through the "Call When Needed" (CWN) process has increased due to increased oil, gas and mineral exploration in Alaska as well as increased off-shore support of the oil and gas industry in the Gulf Coast. The recovery work associated with Hurricanes Katrina and Rita has also contributed to a higher demand for helicopter services nationwide. This means that when the Division of Forestry requires

Fire Suppression, Land & Water Resources (continued) Fire Suppression Preparedness (continued)

FY2009 Aviation Contract Cost Increases (continued)

> time (90 days, usually). This fleet comprises the backbone of the Division's fire fighting capability and is an essential element in the Division's mission to provide wildland fire management and suppression services. Due to a number of air tanker accidents in 2002, the federal government cancelled all of their air tanker contracts until a re-evaluation of the air tanker fleet could be completed. Since that time, only a few aircraft have been approved for use as air tankers and as a result, many of the air tanker contractors have gone out of business. This has led to a decline in the number of viable air tanker contractors within the US, leaving the State with fewer options for obtaining contractual air tanker services.

For the contract that ended at the end of the 2007 fire season, the state contracted two DC-6 air tankers from the Canadian company Conair, Inc. The federal government has not certified these air tankers for use on fires in areas that are protected by federal agencies and it is unlikely that this particular make and model of aircraft will ever be certified for their use. This has led to the inability to share air tankers between the state and federal cooperators which has significantly impacted the efficiencies of both agencies to respond to fires.

The DOF anticipates a significant increase in contractual costs for air tankers due to increased operating costs for the vendors and changes to the US/Canadian exchange rate. A new 5-year contract for two air tankers will be issued in the first half of FY08. The current contractor has indicated that their bid will be significantly higher for these two aircraft than in previous years. In 2006, Conair contracted with the Yukon Territory to provide two DC-6 aircraft with a daily availability that is nearly double what the state paid for the same aircraft in the just-ended 5 year contract. In 2007, the US Forest Service approved several types of air tankers under contract to British Columbia to be used on USFS Fires in Oregon, Washington, Idaho and Montana. It is expected that if Conair again bids on this contract that they will offer one of these federally approved aircraft as a part of their bid. If the state were successful in contracting for a tanker that was approved for use on federally managed fires it would allow the free exchange of air tankers between the state and federal agencies, allow for much greater fire suppression efficiency and save both the state and federal government fire suppression costs. The types of aircraft that were approved in 2007 for federal use are newer, turbine powered aircraft, which are faster and more reliable than the piston aircraft the state has contracted for in the past. At this time, there are no known U.S. vendors who are likely to bid on a state contract.

The Division also anticipates additional increases in the cost of contract helicopters. In attempting to contract for two helicopters last fall, there were no bids for the type helicopter specified in the original Invitation to Bid (ITB). The specifications were adjusted to allow for helicopters with less capability to compete. The final award for these smaller, less capable helicopters was significantly higher than the cost of fully capable helicopters which was awarded just two years ago. There are a number of reasons for these large cost increases, but it is mostly related to a state and worldwide increase in demand for these services while service providers, especially in Alaska, face increased costs related to parts availability, insurance costs, and a number of other business challenges.

Helicopter Detail:

In the fall of 2007, DOF sought bids on three helicopter contracts for three different locations (Tok, McGrath and Soldotna). When the bids were awarded in December 2007, there were five vendors offering a total of six aircraft for the three contracts. Bids ranged from a low of \$3,825/day to a high of \$6,000/day. Even the lowest bid exceeded our pre-bid estimate of \$3,255/day. The three lowest bids were \$3,825, \$4,100 and \$5,500. Although our initial increment requests were based on the best information we had available at the time, the actual costs of the contracts when bids were completed are much higher than our estimates and what was originally requested in the increment.

Tanker Detail:

We were also aware in FY07 that the cost for air tankers would be significantly higher when a new 5-year contract was awarded in the second half of FY08. We requested an increment to cover this expected shortfall for FY08 based, again, on the best information available to us. Anticipating market response to escalating costs within the aviation industry is difficult at best. When complications such as the federal government's decision to cancel all of their large air tanker contracts and the subsequent decertification of a large portion of their aircraft fleet occur, the determination of what assets are available and what their associated cost are is even more difficult. While preparing the FY09 budget it became apparent that we had underestimated in FY08 the likely contract costs for air tankers. We based our initial increment request on a revised estimate that air tanker contract rates for each aircraft would increase to \$8,700/day. When bids were opened on Feb. 5, 2008, there was a single bidder who offered a contract price of \$8,995/day. Once again the estimates used to prepare the increment were short of

collection and distribution, and allocation of fire resources are coordinated through individual agency representation at AICC. AICC is located on Ft. Wainwright in a facility owned and operated by the Bureau of Land Management (BLM), Alaska Fire Service (AFS). Through a Cooperative Agreement and Annual Operating Plan, the Division of Forestry contributes both personnel and operating capacity to these interagency activities. The Division of Forestry pays for employee office space and other services that are provided by BLM/AFS through terms provided in these agreements.

The cost billed by BLM/AFS will exceed \$200.0. The cost increases are reflective of AFS facility operation cost increases, increase in capacity of the Alaska Lightning Detection System, addition of several Remote Automated Weather Stations (RAWS), increased maintenance of RAWS, and a number of other factors including location of Forestry's communications coordinator at AICC. This is the first increment request that the Division of Forestry has made to cover these increased costs.

BLM Alaska Fire Service bills the State for the following services:

(in thousands)
Office Space (Fire Ops Forester), \$7.0
Office Space (Fire Weather Coord.), \$3.0
Alaska Lightning Detection System (ALDN), \$41.0
Remote Automated Weather Station Support, \$83.0
Teletype Support, \$5.0
AICC Base Expenses, \$7.0
Air Attack Building, \$4.0
McGrath Facility Maintenance, \$50.0

Value to the citizens of Alaska will be in the efficient and effective provision of wildland fire operational decision making and support on an interagency basis.

This increment supports the targeted 90% success rate of fires suppressed at 10 acres or less, and reduces duplication of services between the federal government and state wildland fire agencies.

Resource and Fire Program Projects

Portions of this program are being transferred to the operating budget from the capital budget, since they represent ongoing program expenditures. This increment is one of three requests in the operating budget needed to implement this change.

Annual consolidated grant funds from the US Forest Service are used for the State Fire Assistance federal cooperative program to enhance firefighting capacity, support community-based hazard mitigation, and expand outreach and education to homeowners and communities concerning fire prevention. The services from federal State Fire Assistance programs contribute to the component's end result to provide wildland fire protection on state, private, and municipal land commensurate with the values at risk.

The demands of wildland fire fighting in Alaska have changed. Factors such as urbanization, the continued addition of recreation and remote improvements, weather anomalies, liability issues, training requirements are all contributing factors. To meet these demands as well as maintain wildland fire service levels to the public and increase training and job opportunities for Alaskan residents, the Division of Forestry needs to change the approach to fire fighting training with a Wildland Fire Fighting Academy. This approach will give Alaskans an opportunity to establish a foundation for future careers in wildland fire management.

Inc

390.0

Wildland Fire Fighting Academies will provide courses in dispatching, helicopter crew member, engine boss, additional introductory and advanced training required for initial and extended attack fire fighting, and fire business management. Courses will meet standards for National Wildfire Coordinating Group (NWCG) designed to provide a curriculum that reflects the complexity and demands of Alaska's fire fighting as well as meeting national interagency standards. Courses would be in cooperation with the University of Alaska and students would receive college credit establishing a foundation and encouragement towards an advanced degree. The Academies would train 80-120 students, depending on the mix of courses offered.

It is important to note that the term 'Academy' is not used as a location, but a concept for centralized coursework, administration, and opportunity. The primary focus has been in Tok and McGrath where rural students have best been reached. However, it is the intent of the Academy(s) to be able to move as needed to an area where the environment is most conducive or conditions are such that holding centralized training at that location would serve the greatest need.

Wildland Fire Fighting Academies will provide in-state capacity for single-resource personnel and crews while contributing to maintaining an experienced and qualified work force. It will serve to reduce the Division of

FY2012 AMD: Wildland Fire Academy (continued)

Forestry's reliance on Lower 48 agency personnel and crews while providing jobs to Alaskans. Cooperative support, financially and in-kind, has been demonstrated from the Bureau of Indian Affairs, U.S. Fish and Wildlife Service, Doyon Foundation, Tanana Chiefs, Association of Village Council Presidents, and Alaska Fire Service. A majority of this support will be directed towards recruiting, transporting, and outfitting students from rural Alaska.

This increment would have a statewide impact. Academies would be offered in communities such as Tok, McGrath, Fairbanks, and Palmer.

Personal services costs would be used to increase staff months for existing employees. Two Regional Training and Prevention Officers (PCN 10-9810 and 10-9811) are the known, constant PCNs that will be used during each academy year. The use of other PCNs will be dictated by the focus and location of the training which will be determined based on need. This increment also includes travel for student and instructor transportation, training space, and course materials and equipment.

Positive impacts of fire fighting training on individuals, communities, and Alaska

- Individuals: The academy equips Alaskans with the qualifications to take job assignments as single resources or to advance as more experienced crewmembers.
- Villages/Communities: Increased qualifications lead to increased job opportunities which provide positive impact to village/community economies. Each student takes the newly-gained experience and can help mentor rookies and other individuals who are interested in becoming a fire fighter. Fuels reduction strategies can be discussed and that knowledge brought back to the community. One new crew boss can result in 15 other job opportunities for the village.
- Alaska Firefighting Community: Academies will provide the future supervisors on crews, such as a Squad Boss/Assistant Crew Boss/Crew Boss. Their skills sets allow them to be single resources and fill overhead and staffing needs for the agencies and on assignments.
- Sustainability: The success of these two academies and the partnerships developed has laid a strong foundation for future academies. With 9.5% average unemployment in rural Alaska, and some regions at 16%, two thirds of Forestry's current employees eligible for retirement within five years, the academies offer career development opportunities in forestry and management of Alaskan resources to a broader rural group.

Goals and Objectives:

- Reduce the number of fire fighting resources needed from outside of Alaska.
- Increase emergency response preparedness.
- Increase rural Alaskan opportunities for career, educational, and economic advancement.
- Provide additional training for Alaskan's in order to fill vacancies/needs within the Alaska firefighting community.
 - Improves the quality and frequency of use for Alaska Type 2 EFF crews.
 - Increase advanced training opportunities.
 - Increase statewide employment potential in economically depressed areas.
 - Increase recruitment diversity for all fire management organizations.
 - Increase the number of individuals with higher level firefighting qualifications available from rural Alaska.

The Alaska Interagency Coordination Center (AICC) provides services in the coordinated response to wildland fires for all federal and state agencies in Alaska statewide. Wildland fire operations, information collection and distribution, and allocation of fire resources are coordinated through individual agency representation at AICC. AICC is located on Ft. Wainwright in a facility owned and operated by the Bureau of Land Management (BLM), Alaska Fire Service (AFS). Through a Cooperative Agreement and Annual Operating Plan, Forestry contributes both personnel and operating capacity to these interagency activities.

A primary reason for the Interagency Coordination Center is to provide tactical firefighting resources, including smokejumpers and air tankers to fires on a priority basis without regard for agency ownership. The priority is based on current weather conditions, current firefighting resource allocations, and the fire's proximity to human life and property. Forestry must provide current, high quality information for these determinations to be made. This information comes from a variety of sources including: remote weather stations, the lightning detection network, and the mapping of communities and remote properties Geographic Information Systems (GIS). Tactical resource dispatchers are required to make the final determination of which statewide tactical resources respond to which fires in an extremely dynamic situation.

Cost for Calendar Year	2008	2013
Share of AICC Operating Costs	\$ 6,450	\$6,450

Fire Suppression, Land & Water Resources (continued)

Fire Suppression Preparedness (continued)

FY2013 Alaska Interagency Coordination

Center Fixed-Cost Increases (continued)

Additional costs for Calendar Year 2013 include:

- Additional office space for DNR employees working at AICC and increased costs of existing space. Since 2008, Forestry has added the Communications Specialist, Public Information Specialist, and Strategic Planner positions to the AICC office
- The interagency Geographic Information Systems (GIS) program.
- The interagency radio communications network in McGrath and other remote, mountain-top repeater areas.
- The Tactical Resource Dispatch function.
- Maintenance of Weather Stations.

The current budget allocation for this agreement with the BLM is \$265,000. This increment will allow DNR to fully function in the interagency fire program.

In the last decade the number of fires and acres burned annually across the state has increased exponentially. Fire suppression response has become increasingly critical due to the increased number of fires and the severity at which they burn. As the Alaskan population increases, more people and their property are at risk from wildland fire. These complexities require additional expertise in the form of GIS specialists and dispatchers to make appropriate decisions in the incipient phases for fires. These decisions reduce the likelihood of large fires that damage property or threaten lives.

Residents of Alaska living in the fire prone areas may be adversely affected by an increase in the number of large fires. These areas are predominately in the wildland urban interface of Fairbanks, Mat-Su, and Kenai. Geographic Regions Affected:

- Northern and Eastern Interior Alaska
- South Central Alaska
- Southwest Alaska

This increment funds the increased costs for fleet vehicles, which includes fire engines and support vehicles and increased cost for facility maintenance. Fire engines are a essential to initial attack along the road system particularly in the high-risk, high-consequence areas. These heavily populated areas require a mobile, effective firefighting resource to protect homes and lives within the wildland urban interface.

In recent years, Forestry has received Capital Improvement Project funds to purchase new fire engines to replace old Federal excess property and SEF engines that had exceeded their programmed service life. These new engines were purchased through the Department of Transportation and Public Facilities (DOT) and the operating and replacement rates are much higher than the older engines. The two primary reasons for these increased rates are: 1). Forestry was not paying replacement costs for the Federal excess property vehicles and SEF vehicles that had exceeded their service life and 2) these vehicles are often used in dirty, smoky areas and in rough terrain therefore the service life of the new vehicles was shortened from previous vehicles. Therefore replacement costs need to be accumulated at a faster rate.

One additional reason for increased costs for Forestry vehicles is a change in the Department of Transportation's (DOT) methodology to establish operating and replacement costs and the acquisition of new engines. Formerly,

Fire Suppression, Land & Water Resources (continued) Fire Suppression Preparedness (continued) FY2013 Engine Fleet and Fire Facility Maintenance Cost Increases for Same Service Level (continued) DOT vehicles rates were calculated on a regional basis and then averaged to produce statewide department rates. In FY2009, DOT transitioned to individual rates specific to each vehicle. Operating rates and replacement rates are calculated on the basis of individual vehicles including DOT's use of historic maintenance information to establish the rates. As these vehicles are often used in dirty, smoky, rough areas, vehicle maintenance costs are higher for Forestry vehicles than is typical for other divisions and departments. Listed below are two examples of changes in monthly operating and replacement costs: Type 6 small fire engine --Prior to methodology change: \$998/month After methodology change: \$1750/month Type 4 medium fire engine --Prior to methodology change: \$1400/month After methodology change: \$2400/month This increment also provides funding to begin regular maintenance programs at each of the eight Area offices to minimize the long-term deterioration of the Division's facilities. Forestry has received multiple capital improvement project (CIP) funds in recent years to repair backlogged deferred maintenance issues. This has allowed the Division to begin to catch-up on major deferred maintenance issues. This increment would allow Forestry to keep up with the maintenance of its facilities and not repeatedly request CIP funds for deferred maintenance. A portion of the increment will be used for additional staff time of seasonal maintenance personnel, whose primary duties are to work in warehouses and at retardant sites, to perform facility and compound maintenance before and after the fire season. If the increment is not approved, the service life of the vehicles that are primary to the Division of Forestry's mission will not allow for the continued replacement of these engines as necessary. The facilities will not have the necessary maintenance to ensure deferred maintenance issues do not occur and Forestry will continue to request CIPs for deferred maintenance. Program, Services, Recipients Affected: - Communities through out fire prone areas of Alaska - reduced fire risk. - Activity Component - reduced suppression cost by maintaining current state capacity. Geographic Regions Affected: The fire prone areas of Alaska that are the responsibility of the Forestry Fire Program are affected by this increment. These areas include the Mat-Su, Kenai-Kodiak, McGrath, Fairbanks, Delta, Tok, and Glennallen. 1004 Gen Fund (UGF) FY2013 Contracted Air Tanker Costs for Same Service Level IncM 97.1 0.0 0.0 97 1 0.0 0.0 0.0 0.0 0 0 This increment is critical to meet cost increases in contracted aviation support for fire fighting. FY2013 Contracted Air Tanker Costs for Same

Service Level (continued)

six percent for air tankers -- an essential resource for fighting urban-interface fires. The advantage of five-year contracts is locking in lower, longer term rates and was quite successful in the last two bidding cycles. However, the cumulative impact of increased costs, market conditions, and industry changes realistically creates budget increases that can only be met by an increment.

The Division of Forestry aircraft fleet consists of two air tankers, six helicopters, two air attack airplanes, and a utility fixed-wing airplane. This fleet comprises the backbone of the Division's fire fighting capability and is an essential element in the Division's mission to provide wildland fire management and suppression services. The Division considers the mix of owned, leased, and contracted aircraft to be a good business model. The air tankers are typically acquired through a five year, annually renewable contract in which aircraft and pilots are secured for the exclusive use of the State for a set period of time (typically 90 days).

These air tankers will now be even more critical to maintain on long-term contract as the Federal air tankers will no longer be available in Alaska, making initial attack success even more challenging. Up until the 2011 fire season, the U.S. Forest Service maintained seven P-3 air tankers on contract, one of which was routinely assigned to the Bureau of Land Management-Alaska Fire Service (BLM-AFS) during the Alaska fire season. This aircraft has been available to respond to Division of Forestry fires. However, these P-3's no longer comply with the federally required maintenance program and the USFS cancelled all seven contracts. It is not anticipated that these contracts will be renewed. The only remaining large national air tankers are the P-2V's which are ex-military aircraft and cannot be cleared to travel through Canadian airspace. These aircraft will be unavailable for use in Alaska. The result of these changes in aircraft status will mean that for the first time ever, Alaska will not have access to federal air tankers.

The Division anticipates an increase in contractual costs for air tankers based on past increases in these contracts. As the federal air tanker fleet diminishes, there are fewer examples of current contract prices but given the status of the federal fleet and increasing competition, it is reasonable that the contract costs will increase. During the last five-year contract cycle (2008-2012) the contractual obligation is currently \$1,619,100 for the 2011 90-day contractual window. This is an increase in the cost of contracted tankers from 2007 until 2011 of \$650.0. DNR did receive an increment in FY 2008 for \$234.4 to partially mitigate this additional cost. The increase for the 2013-2018 contract is not anticipated to be as large as past increases. The Division expects to be able to maintain its current air tanker fleet with the addition of \$97,100.

If the Division cannot support two large air tanker contracts, the result will be reduced success in initial attack statewide. As there will be no federal air tankers to respond to wildfires this would mean no air tankers in Alaska. The initial attack success rate will be dramatically reduced both in the areas of the state that the Division provides wildfire protection but also in the areas where the BLM-AFS provides protection services on State lands. This reduced initial attack success will result in larger fires, greater property loss, higher risks to the citizens of Alaska, and increased fire costs.

Recipients Affected:

- Communities through out fire prone areas of Alaska reduced fire risk.
- Activity Component reduced suppression cost by maintaining current state capacity.

Geographic Regions Affected:

FY2013 Helicopter Contract Costs for Same Service Level	IncM	119.6	0.0	0.0	119.6	0.0	0.0	0.0	0.0	0	0	0

This increment is critical to meet cost increases in contracted helicopter support for fire fighting. Immediate helicopter response can mean the difference between small fires and large project fires that can cost millions of dollars. The lack of road based access, large distances, and the need to respond quickly to emergent fires in Alaska make helicopters a necessary firefighting tool for successful initial attack. These aircraft move firefighting crews, supplies, and drop water on fires quickly and efficiently. Without these aircraft, response times to fires would be much greater which would result in larger, more expensive fires that would be more likely to effect life and property. Three of the Division's six helicopter contracts are expiring and comparable private sector contract comparisons indicate a 4% increase for helicopters. The advantage of the five year contracts is locking in lower, longer term rates and has been quite successful in the last two bidding cycles. However, the cumulative impact of increased costs, market conditions, and industry changes realistically creates budget increases that can only be met by an increment.

The Division of Forestry contract aircraft fleet consists of two air tankers, six helicopters, two air attack airplanes, and a utility fixed-wing airplane. This fleet comprises the backbone of the Division's fire fighting capability and is an essential element in the Division's mission to provide wildland fire management and suppression services. The Division considers the mix of owned, leased, and contracted aircraft to be a good business model. The helicopters are typically acquired through a five year, annually renewable contract in which aircraft and pilots are secured for the exclusive use of the State for a set period of time (typically 90 days).

The alternative to these long-term contracts is to acquire helicopters under emergency procurement authority for short time spans. This type of procurement, although used to supplement Forestry's helicopter fleet during high fire activity, is not as economically efficient for extended periods of use. The 2011 Emergency Rental Agreement for similar helicopters was \$2,995 per hour. The current long-term contracts are less than \$1,600 per hour. Also, helicopters are seldom available at short notice during the fire season due to other, more lucrative contracts.

The Division anticipates an increase in contractual costs for helicopters based on past increases in these contracts. There continues to be an increased state and worldwide demand for these helicopter services while service providers, especially in Alaska, face increased costs related to parts availability, insurance costs, and a number of other business challenges. During the last five-year contract cycle 2011-2015, contract solicitations included bids as high as \$9,900 per day not including mission flight hours. This increment request reflects an increase of 4% in the three helicopter contracts plus a 3% Consumer Price Index increase for the remaining three helicopters.

The current contractual obligation for six helicopters is \$2,203,650 for the 2011 90-day window. The Division expects to be able to maintain its current helicopter fleet with the addition of \$119,600.

If the Division cannot support six firefighting helicopters, the result will be reduced success in initial attack statewide. There are few alternatives in Alaska so similar firefighting resources would need to be acquired from the lower 48 at a greatly increased cost. Helicopters from the lower 48 typically cost \$30,000 for the flight time to

Numbers and Language

Agency: Department of Natural Resources

Trans Tota1 Personal Capital Type Expenditure Outlay | Services Travel Services Commodities Grants Misc PFT PPT Fire Suppression, Land & Water Resources (continued) Fire Suppression Preparedness (continued) FY2013 Helicopter Contract Costs for Same Service Level (continued) reach Alaska and another \$30,000 to return to their station, this does not include any costs associated with fire work in Alaska. These helicopters also typically take four days to reach Alaska which means they must be prepositioned in Alaska prior to fire activity to be effective in initial attack. This also increases costs. Reduced initial attack success will result in larger fires, greater property loss, higher risks to the citizens of Alaska, and increased fire costs. The communities and residents of Alaska who live in fire prone forests will be affected due to the lack of success in initial attack firefighting. In particular, wildland urban interface areas such as Fairbanks, Mat-Su and Kenai would be significantly affected without helicopters stationed in these areas. Geographic Regions Affected: - Northern and Eastern Interior Alaska - South Central Alaska - Southwest Alaska 1004 Gen Fund (UGF) 119.6 100.0 100.0 0.0 0.0 0.0 0.0 0.0 0.0 0 FY2013 Firefighter Payroll Interagency Authority Inc Increase interagency receipt authority for emergency firefighter payroll services to the Fire Activity Component.

Paid by administrative fee charged to the federal government for support on federal fires.

This request funds Division of Forestry's new responsibility for payroll entry that has historically been performed by the Department of Administration (DOA) Division of Personnel, for 300 to 600 emergency firefighters (EFF) each season.

No new PCNs are being requested. This increment will fund two vacant PCNs (previously federal grant-funded), that are being transferred from the Forest Management and Development Component to the Fire Suppression Preparedness Component and that are being reclassified as Human Resource Technicians to assume this new workload. With this funding, the two regions (supporting multiple geographically-dispersed offices) will each have a PCN for payrolling, appointment information, data entry, payroll system hierarchy maintenance, and timekeeping functions.

DOA is discontinuing use of the DNR-developed EFF Firefighter Payroll System with implementation of the statewide timekeeping system (ASSETS). DOA has notified DNR that it does not intend to perform entry of firefighter payroll. Deployment of ASSETS will be staggered, with DNR's migration scheduled for FY13.

Time entry and recording cannot be performed by emergency firefighters themselves. They are a highly mobile and transitory work force working in remote field conditions, with lack of time and capability to use the state's administrative timekeeping technology being implemented by DOA. The nature of their employment precludes them from entering their own time into the new payroll system being implemented by DOA.

Although the DOA system is not fully functional, DNR knows that at least the EFF payroll entry will need to be assumed by Forestry and cannot be performed by the employees. Similarly, many permanent personnel need human resource support to enter time when workers are in the field. Activities also include verification and non-standard approvals of time collected from remote locations, required for accuracy and timeliness to meet interface deadlines for payroll.

The goal of the project is to enhance the growth opportunities for Farmers Markets in Alaska, and through expansion of these markets provide additional outlets for Alaska farmers. This will be accomplished by documenting current financial and organizational structures of farmers markets in Alaska. Analyze these

Farmers markets in Alaska want additional growth, and more growth is possible if markets can do two things. First, they must properly promote local Alaskan production as the first choice for consumers, and second, they

must operate in an efficient business framework.

The Alaska Division of Agriculture, through a Memorandum of Understanding and Cooperative Agreement with the United States Department of Agriculture (USDA) provides phytosanitary certification services for Alaska businesses exporting logs and plant products (primarily mushrooms) to foreign countries. Foreign countries require that licensed state or federal Export Certification Officials conduct phytosanitary certification inspections before products can enter their country. Phytosanitary certificates are issued to indicate that consignments of plants, plant products or other regulated articles meet the importing countries specified phytosanitary import requirements and are in conformity with the certifying statement of the appropriate certificate.

Foundation Seed Program												

Primary Clientele and Constituents:

The Plant Material Center (PMC) serves the seed growers of the State of Alaska and is programmatically tasked through the enabling legislation to encourage and develop a healthy seed industry in Alaska. Presently these growers provide seed to in-state construction companies and the Department of transaportation and Public facilities (DOT/PF) for road side erosion control and revegetation, Department of Defense contractors for revegetation projects, the mining industry for reclamation, and to a multitude of other state and federal agencies (Bureau of Land Management, US Forest Service) who are tasked with reseeding/revegetation projects through Alaska.

As a direct result of the PMC foundation seed project and the federal funding source used in the past, the in-state seed producers are able to deliver native plant seed stocks to the end users. These seed stocks were directly developed for use in Alaska by the PMC and are the initial seed stock used by the commercial growers to produce the seed they sell to these end users. The program that has evolved with the PMC, seed growers and retailers is a classic integrated economic development scheme that works well for the growers in Alaska and all involved in the

FY2009 Decrease Unrealizable Federal Receipts for the Foundation Seed Program (continued)

system. The end users have seed free of invasive species, noxious weed and other impurities that could cause problems.

The PMC is the only source for this seed that the seed growers need to start their fields. They are also the source of information on how to use the material appropriately. There are no sources elsewhere in the US for the materials developed by the PMC. A small amount of seed has found its way into Canada but this is not significant. Also Iceland supplies some hairgrass as a backup to Alaska needs. This too is Alaska developed hairgrass but being produced in Iceland. In short, a fully funded Foundation Seed Program at the PMC is crucial to the seed industry in Alaska. With the supplemental Federal Funds that have been used to fill gaps in state funding, a strong and effective seed program was developed at the PMC. This needs to be continued.

Background:

Funding for the PMC has been a complex mix of sources. Between FY97 and FY06 the PMC operated with funding coming from Agricultural Revolving Loan Fund, Federal funding, Interagency Receipts, General Fund Program Receipts and Statutory Designated Program Receipts sources. Federal funding was primarily from Congressional Appropriations (Earmarks).

Three of these earmarks were directly tied to the operating mission of the PMC specifically in Foundation Seed/Seed Industry development: Cold Regions Evaluation Project, Native Plant Commercialization Project, and the Seed Grower's Assistance.

These projects funded specific segments of the PMC's mandated mission of Foundation Seed/Seed Industry Development Program. They provided for 1) seed collection, evaluation and increase (including a few items of traditional Foundation seed production), 2) New crop development and demonstration to end users (including some aspects of traditional Foundation Seed programs), and 3) Promotion and Public education (Revegetation Manual and Plant Flyers) including some for existing Foundation seed varieties.

What will the \$500.0 GF purchase?

These funds will fill the gap that has evolved over the years in the Foundation seed program and allow continuation of the program as it has evolved and described above from seed collection to new crop development and public education. In short this will replace the federal funds used to support the foundation seed program or its legitimate segments. These funds, in conjunction with the GF appropriation already included for the PMC, will cover all the facility operation and maintenance costs, and overhead costs. The \$500.0 will allow for the continued operation of the Official Alaska State Seed Lab.

This request is driven by Alaska potato growers, and will be used to provide them with pathogen-tested and certified seed as per 11 AAC 34.075(J). Testing will be done at a facility in the Lower 48. These funds will not be used to directly or indirectly support University of Alaska projects, nor will any portion of the funds be paid to the University of Alaska for goods or services.

The potato project was initiated in 1984 to help stop the significant disease losses occurring to Alaska's potato crops. Many diseases of potato are carried in or on the potatoes used for seed. Requiring the use of certified seed is a primary means of reducing the risk from the seed sources. The PMC potato project utilizes micro propagation procedures to provide growers with pathogen-tested and certified seed to break the disease cycle. Clean stocks are rapidly multiplied in the laboratory using sterile tissue culture techniques. Propagated potato plants are then planted in an insect resistant greenhouse to produce a crop of mini tubers (seed). Certified Potato Seed Growers purchase this seed through the PMC to plant for on farm increase and for the potato seed certification program in which the crops are visually inspected for disease. Seed plots with too much disease are removed from seed status.

Some disease epidemics have been traced to uncertified or inappropriate seed. The potato program helps to prevent the introduction of diseases to Alaska by providing certified and tested seed stock. The introduction of unwanted pests and diseases could result in increased use of pesticides. Many of the varieties produced by the PMC and requested by Alaska seed growers are not available from other sources. These varieties will become the PMC's primary crop and concern.

All seed potato certification programs in the U.S. and Canada require the initial seed stock be derived from pathogen-tested tissue culture produced seed. Alaskan produced certified seed potatoes presently meet or exceed these requirements due to the efforts of the PMC potato project.

The spending plan would include extending the seasons for one Agronomist (PCN 10-3076) and four support labor positions (PCN 10-3051, 10-3055, 10-3066, and 10-3081). The budgeted months related to these PMC

The horticulture industry is by far the largest and most significant segment of commercial plant production in Alaska. A horticulture evaluation and development program at the Plant Materials Center (PMC) will service the primary users such as the landscape industry, peony and berry crop industries, rhubarb producers and a large contingent of diversified growers throughout Alaska. The program is well supported by the various commodity and industry groups.

The recent closure of the U.S.D.A. Agricultural Research Service (ARS) Station in Alaska has pulled nearly all support and assistance from the horticulture industries in Alaska. The PMC has acquired the plant materials from the ARS research group and has placed them in winter storage. None of the research material has been lost, however establishment of this program in the PMC is critical to the ongoing support of the existing material and these industries. The Division of Agriculture has had repeated requests for a horticultural development and evaluation program from industry as well as the Plant Materials Center Advisory Board.

The program will address the needs of this large and varied industry in developing new crops, determining which varieties to produce, and evaluation of the technology needed to be competitive.

FY2018 Restore Funding for North Latitude Plant Material Center	IncM	335.0	325.0	0.0	10.0	0.0	0.0	0.0	0.0	0	0	0

During SLA 2016, the North Latitude Plant Material Center (PMC) was reduced by \$335.0 in general funds and then restored as a one-time item. The PMC has reached out to agricultural producers, educating them on the need for a fee for services structure and a 20 percent increase to existing fees. Industry has been fully supportive, but the estimated revenue of approximately \$10.0 in FY2017 will not replace these funds.

The PMC evaluates, maintains and produces high-quality seed needed for commercial production, and develops plant materials and crop production methods suitable for agriculture, and revegetation and reclamation projects in Alaska's unique environment. Additionally, the PMC manages the invasive plant and pest programs.

The Foundation Seed, Horticulture, Potato, and Native Plant programs at the Plant Materials Center (PMC):

- Produces high-quality, foundation-level seed necessary for grass and grain seed production in Alaska.
- Evaluates and develops production methods and varieties for commercial crop production in Alaska.
- Produces virus- and disease-tested seed potatoes that are the foundation of Alaska's potato industry.
- Evaluates and releases native plants suitable for commercial production and revegetation.

The production programs provide critical services to producers, nurseries and greenhouses, processors (potato, flour, distillery, etc.), retail stores selling Alaska Grown products, seed distribution centers (feed and seed retailers throughout Alaska), land management agencies, contractors for reclamation projects, Alaska Grown product consumers, and home gardeners.

The invasive plant and pest management program within the PMC limits the introduction and spread of freshwater invasive plants, terestrial invasive plants, and plant pests in Alaska through education, prevention and collaboration with other state agencies and community organizations.

FY2013 Funding Redistribution from Agency-wide Position Deletions for Dispatch Coverage from Kenai Peninsula Borough (continued)

personal services funding shortfalls or other priority projects within the department.

DNR deleted 20 vacant positions across multiple components. General fund savings from the deleted positions is reallocated between components to cover personal services funding shortfalls or other department priority initiatives.

Prior to these funding transfers, personal services funding shortfalls existed in many components at a level that was not manageable without either a general fund increment, or a reduction of positions (most of which are filled) and a loss of service. Shortfalls are primarily a result of when employees receive merit increases, the cost is reflected in the personal services budget need, but the budget is not increased to cover the cost. The general expectation is that departments are responsible to cover merit increases through turnover and vacancies in a component, assuming that will generate savings to offset the merit increases. When components experience little turnover or have few vacant positions, there is no cost savings to cover the increases. The Governor's budget recognizes the need to cover these shortfalls by allowing for the transfer of savings between allocations.

General fund was reallocated as follows:
Commissioner's Office \$100.0
Administrative Services \$125.0
Information Resource Management \$269.2
Citizens' Advisory Commission on Federal Areas \$13.0
Parks Management & Access \$80.0
Gas Pipeline Project Office (\$223.4)
Petroleum Systems Integrity Office (\$281.2)
Forest Management & Development (\$82.6)

The Division of Parks and Outdoor Recreation (DPOR) employs one full-time dispatcher on the Kenai Peninsula who provides dispatch to the Kenai Area staff five days per week during business hours. Park rangers working outside the DPOR dispatcher's schedule have been receiving dispatch services from a coordinated center run by the Kenai Peninsula Borough (KPB); DPOR has not provided any funding to the center. The Kenai dispatch center also provides services to the Alaska State Troopers, all Kenai Peninsula emergency service organizations and the Soldotna Police Department who all provide funding to run the center.

DPOR has been notified that park rangers can no longer receive dispatch services from the KPB-run center unless funding is provided to hire an additional dispatcher to help cover the park rangers. What has changed is that more troopers were hired to work on the Kenai Peninsula through a federal highway safety grant but no additional funding was available to cover those trooper's dispatch needs.

If Kenai Area park rangers can no longer use the KPB dispatch center they will not have assistance outside of the DPOR dispatcher's schedule. This places the rangers in a unsafe position, with no effective communication should they make an enforcement contact, get injured or require assistance.

This \$80.0 will be paid to the Kenai Peninsula Borough and they will provide the necessary dispatch services on

FY2017 Reduce Funding for Permit Applications Statewide and Administrative Support in Kodiak	Dec	-86.4	-86.4	0.0	0.0	0.0	0.0	0.0	0.0	0	-1	0

Eliminating the funding for one Natural Resource Specialist I/II could result in an increased backlog of commercial use, special use and filming permit applications to be processed and a potential loss of permit revenue. This position will be transferred to the Boating Safety Program and reclassified to a Park Specialist within the Parks and Outdoor Recreation component where a non-permanent position has been used for years. Existing federal funds will be used to cover the costs associated with this full-time position.

Parks & Outdoor Recreation (continued) Parks Management (continued)

FY2007 Funding to Continue State Park Operations at Current Service Levels (continued)

> from receipt supported services to \$513.4 in general fund results in a potential operating shortfall for Parks Management of \$1,046.3. The Division of Parks requests this general fund increase to cover the following costs:

Personal Services Increases:

Parks is \$195.7 short in authorization to fund the personal services costs with a reasonable vacancy factor. This increment covers the shortfalls in funding previously assigned to federal and interagency receipt authorization in the amount of \$35.7, and puts \$159.9 towards reducing the vacancy factor level to a more manageable 3.35% (or \$186.3). Without this increment, Parks would have to reduce to the length of time we can keep our parks staffed.

Operating Services Increases:

The majority of contractual services for parks is used for utilities, vehicle and service contracts for items such as latrine pumping, trash hauling, etc. Parks budget for these services is 15% lower than it was in 1999 while the cost increased 12.7% for these services over the same period of time.

Parks maintains 397 buildings that include 8 visitor centers. These properties are worth over \$20.0 million to the State of Alaska. Parks also maintains a vehicle fleet of 183 items ranging from lawnmowers and trailers to Ranger vehicles

Commodities Increases:

The commodities budget provides the uniforms for staff, firearms & ammunition for rangers and other staff, and provides the building material needed for minor emergency repairs necessary for the health & welfare of Park users and staff. Seventy-five percent of this line item is used for these three items. The remainder is used for office supplies, cleaning supplies, and necessary items such as toilet paper for latrines, etc.

Parks budget for commodities is 3% lower than it was in 1999 while the cost increased 11.7% over the same period of time.

Travel and Transporation Increases:

Parks has seven regional offices and a Division headquarters that are responsible for large geographical areas of the state. Parks is responsible for the operation, maintenance and law enforcement needs for a vast park system that includes 397 properties (including 73 public use cabins), 2,661 campsites, 1,448 picnic sites, 37 boat launches, 8 visitor centers, 43 scenic overlooks and 128 trailheads as well as hundreds of miles of trails. This requires staff to travel to remote locations to inspect facilities and supervise the day-to-day activities to ensure that health and safety standards are being met for the public. In addition, the Park Rangers have a mandatory in-service that they must attend each year in order to maintain their commissions.

State Parks now has two boards, Snowtrac and the Outdoor Recreation Trail Advisory Board, which require funding for the travel and transportation of these board members. This increment request gets the Parks' budget close to the average travel costs required over the past three years.

Background information:

Parks has made reductions where possible and has traditionally met the increased costs by implementing cost saving measures such as reducing staff cost, not providing uniform allowances, and reducing vehicle usage to

The Department's staff travelled the state to receive public input into a 10-year Strategic Plan for our State Parks. One of the most important items coming out of this strategic plan was for the State to protect its Parks assets in order for it to be a quality experience for its visitors. To implement the key element of improved maintenance this increment proposes to staff-up our maintenance staff, which will allow us to reduce the growth of our deferred maintenance backlog; and to perform preventative maintenance rather than having to rely on emergency repair or other capital budgets.

For deferred maintenance, it has been determined that there needs to be a dual approach through the operating and capital budgets. The operating budget will finance maintenance personnel statewide that will serve to protect the existing assets of State Parks. They will perform the preventative maintenance on property that is not on the deferred maintenance list and will also complete minor deferred maintenance projects to help stem the increase in

deferred maintenance. In order to accomplish this, State Parks needs to have full time staff dedicated to the goal of providing high-quality, sustainable, safe and affordable recreational opportunities for Alaskans and visitors. The capital budget will be used to complete major deferred maintenance projects through the use of contractors.

In order to attract the quality camp host we need to be competitive in the amount of stipends that are paid out. The quality campground host has more options than ever. They can now get full hookups, free camping passes, and receive large stipends from the federal park system, US Fish & Wildlife, and even some school districts. Alaska State Parks does not have full hookups for most of our hosts, we do not have camping passes, so the only thing we have left to offer to be competitive is the stipend and for staff to be able to support them.

Using these methods, the 5.0 million visitors to the Alaska State Park system should find the parks a more enjoyable experience as they will be cleaner and safer for themselves and their children.

Specific Detail: Personnel: \$365.8 Travel: \$81.3 Services: \$200.0 Supplies: \$52.9 Total = \$700.0

Position changes:

New - PCN 10-#038 Natural Resource Technician II located in Chugach State Park
New - PCN 10-#041 Maintenance Sub Journey II for Kenai area located in Soldotna
PCN 10-5028 Maint Gen Journey located in Fairbanks part-time/seasonal (PT) to full-time (FT)
PCN 10-5082 Maint Gen Journey located in Willow PT to FT
PCN 10-5087 Maint Gen Sub - Journey II located in Finger Lake PT to FT
PCN 10-5175 Maint Gen Sub - Journey II located in Fairbanks PT to FT

Travel

Increase subsistence payments for campground hosts: Alaska State Parks has been paying \$150 - \$300 a month in stipends for campground hosts to offset the cost of traveling and living in the campground. The National Wildlife Refuges in Alaska has been paying up to \$1,000 a month for the same service. Because we are not competitive and do not provide the same amenities as other agencies we are having a hard time recruiting hosts. We would like to increase their stipend to at least \$500 a month so that we can attract more quality campground hosts.

Increase travel for staff so that they may manage the facilities that require travel such as in the Northern, Kenai, Wood-Tikchik and Southeast areas.

Services:

The cost for some of the basic services that Parks contracts for such as pumping of the toilets, trash hauling, snowplowing, etc. have doubled in the past year. Parks has increased the amount needed for services to accommodate these necessary services.

FY2006 Increases of GF Match to support Coal Program (continued)

operations. The program is 50% federally funded which requires a 50% required state match from General Funds.

Over the next few years, the industry is expected to expand. The state's major coal company is expanding facilities to the Jumbo Dome properties in Healy to supply a proposed new power plant, and has sent test shipments overseas to Chile and other markets. DNR has been approached to re-permit long-dormant properties in Sutton and Beluga. The Governor is working on potential agreements with Taiwan that could result in significant expansion. The existing staff cannot accommodate the potential expansion. The general fund will match federal funds so that the staff needed to provide services to the coal industry as expected expansion occurs can be funded.

The General Fund match for the program has remained relatively constant from FY 1998 to the present: it has failed to keep up with cost-of-living and contract adjustments. Because the lower GF funding causes a one-for-one decrease in federal funding, staffing has dropped from 4.125 to 3.47 FTEs. This gradual drain on a fully funded Coal Regulatory Program has resulted in a gradual decrease in the quality of oversight of coal mining and the quality of service provided to the mining industry.

General Mine Permitting:

Three positions are requested for the General Mine Permitting Program to improve the quality of the technical reviews of both placer and hard rock mining projects, the timeliness of the issuance of permits and plan approvals. and the documentation of the General Mine Permitting Program's regulatory oversight of the mining industry. Current staffing levels are lower now than in 1992, when placer mining was the focus of activity and only two hard rock mines were in operation (Red Dog and Greens Creek, neither of which had significant DNR involvement at that time). No large mines were in development, being reclaimed or in the permitting process in 1992. Since then, Red Dog and Greens Creek are still in operation, Ft. Knox and True North are in production, Illinois Creek is being reclaimed and permitting processes for projects such as Donlin Creek, Pebble Copper, Rock Creek, Nixon Fork and Gil have been initiated. In addition, placer mining, claim staking and mineral exploration activities are all increasing. With the current staffing level, the Mining Section is challenged to provide the quality of service expected by Alaskans and by the modern mining industry. Positions requested include:

One Geologist III (Range 18) - (10-#006) based in Anchorage is requested to participate in mine and exploration permitting and inspection activities in Southwest, Southcentral and Southeast Alaska. This would allow routine and more frequent inspections of all mining operations and exploration activities in these regions along with improved documentation of progress and compliance. The increased frequency of proactive inspections would provide a larger degree of compliance assistance to mine and exploration project operators and provide a greater degree of confidence to the state that all activities are adhering to permit stipulations.

One Geologist I (Range 14) - (10-#007) based in Fairbanks to participate in placer and hard rock exploration project inspections, primarily in the interior. The increased level of activity in interior mining districts has resulted in more district flyovers and fewer on the ground inspections of placer mines and exploration projects. This position would focus on participating with current staff by inspecting and providing technical and compliance assistance to placer miners and exploration projects throughout the interior. This would allow more routine and

FY2006 General Mine Permitting and Mineral Property Management Workload Increases (continued)

more frequent inspections of more mining operations and exploration activities in this region along with improved documentation of progress and compliance. The increased frequency of proactive inspections would provide a larger degree of compliance assistance to placer miners and exploration project operators and provide a greater degree of confidence to the state that all activities are adhering to permit stipulations.

One Mining Engineer Associate (Range 18) - (10-#005) based in Fairbanks to participate in the technical review of large mine projects. The increase in the number of large mines in the permitting process requires additional, experienced technical staff in order to provide an efficient process for all projects to advance along acceptable time lines. The current level of experienced technical staff support within the Mining Section is limited. This position would also participate in providing compliance assistance and technical support to placer and hardrock mines in the region.

The additional staff would provide a more manageable distribution of the workload related to increased placer and hard rock mine permitting and mineral exploration and also increase the level of technical assistance provided to miners in the field. The quality and timeliness of service to the mining industry, in the form of proactive, rather than reactive, inspections and documentation would be significantly increased. This would have the direct effect of making Alaska a more attractive location for the expenditure of mineral exploration and development dollars. Each new significant discovery results in a dramatic increase in the staking of state mining claims with a resulting increase in payment of claim rental fees as well as an increase in the potential development of stable, high-quality mining jobs for Alaskans.

Mineral Property Management:

Two positions will provide the capacity for more accurate and timely filing and billing for statewide mining activities and will create increased capacity to conduct audits and to process penalties/cures for abandonment which will lead directly to increased revenue from mining.

The positions are necessary due to the increased level of claim staking and mining applications we are receiving as a result of the major mine development projects occurring throughout the state and the rising price of gold, silver, copper, lead, zinc and platinum. In conjunction with the staking and mining applications we are issuing more mining licenses. In addition, we now have the penalty provision to cure abandonment which will require more computer and paper transaction work, but which also gives more security to the mining industry and increases some revenue to the state. The above changes are a benefit to the industry and state government, but require additional adjudication and paperwork.

One additional Administrative Clerk II (Range 8) - (10-#003) is requested to assist current APMA and billing staff with filing, LAS research, printing for the adjudication and data entry for processing and maintenance of mineral records. This position would assist the Program Manager with record keeping and maintaining archived records. Overall, this position would reduce the time it takes current staff to process claims, labor, rent, and APMAs.

One Accounting Technician (Range 12) - (10-#004) is requested to administer and process annual mining license tax and royalty returns. Prior to the year 2000, a staff position existed for this work. The Mining Section lost this position after the employee retired without funding to refill it and there has been a backlog since that time. We are currently 3 years behind in processing these documents. In order for us to process and adjudicate production

DNR is establishing a new office in the Division of Oil and Gas called the Lease Monitoring and Engineering Integrity Coordination Office (LMEICO). As part of this new coordination effort, the Division of Mining, land and Water (DMLW) is required to provide a liaison to work with this office. DMLW is responsible for many authorizations related to the exploration and development of oil and gas leases. These include pipeline rights of way, other easements, permits, material sales and other associated leases.

The liaison position will be established utilizing an existing but previously unfunded position (Natural Resource Specialist IV, PCN 10-1863) and will coordinate all DMLW oil and gas authorizations statewide but not directly supervise the other DMLW employees. It will be crucial to participate in the first steps of creating this office this fiscal year, therefore creating the need to establish this supplemental funding. Some of the duties include gathering appropriate case files to share with the LMEICO, reviewing both internal and external cases, and coordinating efforts of existing regional staff. The liaison will ensure the required coordination without slowing down existing authorization procedures; process some of the oil and gas authorizations; potentially create new regulations, orders, procedures related to oil and gas authorizations; coordinate DMLW's participation on a multidisciplinary team on oil and gas projects requiring participation of experts such as geologists, economists, petroleum geophysicists, commercial analysts, environmental specialists, engineers, hydrologists and assistant attorneys general; resolve multi-agency conflicts or disputes; budget preparation; represent the department before public, legislature and industry on highly technical issues impacting oil and gas exploration and commercial development; analyze comments and recommendations made by state, federal and local agencies, user groups, the public, and the oil and gas industry; balance competing interests and recommend resolution; respond to comments on behalf of the department; and negotiate permit conditions.

FY2012 Correct Unrealizable Fund Sources for Personal Services Increases	FndChg	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0

This component requests \$67.6 GF to replace unrealizable fund sources.

The Claims, Permits, and Leases (CPL) component anticipated and budgeted for potential federal mining grants which were not forthcoming. In FY10, CPL budgeted to collect \$946.3 in federal revenue, however only \$675.5 was received and expended. A decrement to reduce excess federal authority will be submitted as part of the FY12 Governor's budget for this component in the amount of \$377.5.

GF Match, \$5.1

Reduced federal funds affect the need for GF Match. The increase will not be utilized as match since the component will not be receiving the federal funds.

IA Receipts, \$13.1

The component typically receives a number of RSA's for Large Projects. However, many of the RSAs are for projects that do not fully materialize in the budgeted amounts (such as gas line projects) and are closed without being able to be fully utilized. In FY10, the component budgeted for \$521.0 in IA, but only \$258.4 was received and expended.

Statutory Designated Program Receipts (SDPR), \$7.2

The component occasionally receives SDPR receipts for special projects for the private industry or non-profit groups. However, it does not appear that the component will collect their full authority for SDPR in FY11 or any additional in FY12. In FY10, the component budgeted for \$209.3 in SDPR, but only \$75.4 was collected and expended. Any additional SDPR authority will be unrealized.

Shorefish, \$14.1

The component collects Shorefish revenue for shore fish permits. This program is growing, but has not reached a level to collect receipts at the current authorization level. The program does not anticipate the FY12 shorefish receipts will exceed the FY11 authorization level and the increase in authorization will not be realized.

The total of \$67.6 of unrealized funds in the component will lead to additional required vacancies in personal services in order to meet the budget if this fund change is not approved. The Division of Mining, Land and Water already requires an estimated 23 vacancies in order to meet the current FY11 budget and any additional vacancies will cause an increase to the growing backlog.

This request funds existing PCN 10-1846, Natural Resource Specialist III. The position is required within the Mining Program to meet requirements for maintaining federal grant funds for the Coal Regulatory program as follows:

The Division of Mining, Land and Water (MLW) is seeking to increase the staffing level (using this existing, unfunded position) of the Coal Regulatory and Inspection Program to meet an increased workload and comply with a request by the federal Office of Surface Mining (OSM) to maintain adequate staffing for this program.

In the past three years two new projects have entered the permitting process, there is a renewed interest in the start-up of the Wishbone Hill mine, and there is an increase in the amount of exploration. In addition to the inspection and permitting of conventional coal mining, all aspects of underground coal gasification (UCG) are under the authority of the Coal Program. One company is actively drilling targets for UCG and a second company is acquiring coal leases and plans to submit exploration permits in the next year. This has increased the amount of public involvement and also resulted in filing of three "lands unsuitable for mining" petitions. In addition to the permitting work required to review these projects, staff is also required to perform monthly site inspections of all active projects. Because of the small size of the program, each of the professional staff must conduct permit reviews as well as perform inspections.

Current staffing levels have remained relatively unchanged since 2001 at around 3.5 FTE, with three people devoted to permitting and inspection. This was the minimum number to meet the needs in 2001 and it has not been adjusted for the increased workload. Coal mining operations are regulated under a federal program that the State of Alaska has maintained primacy over since 1983. The federal Office of Surface Mining conducts oversight

Resource Development (continued) Mining and Land Development (continued)

FY2012 Public Land Stewardship including Mine Permitting, Compliance and Assessment (continued)

MLW has also seen a need for more rigorous permitting and oversight of mining activities. In the last five years there has been a dramatic rise in the number of placer mining operations, large scale metal mines, and large scale exploration programs. At the same time, public interest and concern about these activities has increased. DNR is currently defending several lawsuits regarding permits for mineral exploration. Increased on-site inspections at large mine projects are necessary to ensure permit compliance. The high volume of mining activities in 2010 resulted in permitting time for placer mining and mineral exploration activities of up to 6 weeks, far above the expected and desired time of 2-3 weeks. Timely and accurate processing and auditing is required to maximize mining revenues to the state. Increased travel costs have resulted in limited field inspections and technical assistance for miners.

In order to increase field presence without increasing the size of permanent state government employees, summer interns or short-term non-perms, under the supervision of current staff professionals, will be used to perform some field inspections and interface with the public.

Along with the increase in activities on state land the division has a constitutional and statutory responsibility to provide stewardship of these lands. Stewardship of state lands ranges from ensuring access for oil and gas development; to providing materials for infrastructure construction; to providing site- specific inspections of mineral development projects; and to interacting with the public where state lands are used for recreational purposes. Interaction with the public in areas of high recreational use consists of trash removal, providing public information (such as signage, web sites, maps), clearing timber and brush, or resolving damage and unauthorized use of state land. In areas of high use, such as the Rex trail in the interior, these funds could be used by the division to contract experts to develop prescriptive analysis to aid in trail rehabilitation.

Five existing positions that have been held vacant due to the lack of funding will be used to provide the ongoing management and permitting responsibilities for public use and private development on state lands. In addition to personal services costs, this increment covers the travel (site-specific mining inspections and recreational use area management), services (such as contracts for trail rehabilitation) and commodities costs associated with managing the public and private uses of state land.

ISSUE

The state's land base has increased by 8 million acres over the last five years, and the Division of Mining, Land and Water has not been able to keep up with the increasing number of applications to use this land. The division now has a backlog of over 2,300 applications. Through a combination of restructuring the permitting process and additional staff, the backlog will be significantly reduced, and eventually eliminated.

BACKGROUND

The Division of Mining, Land and Water is requesting an FY2012 amendment of \$1,421.0 to eliminate a backlog of

Resource Development (continued) Mining and Land Development (continued)

FY2012 CC: Improve Efficiency of Land and Water Use Application Process (continued)

land and water use authorizations. With this amendment, the division will establish six new positions, and fund five vacant positions. With these positions, the division will work to streamline and make more efficient the current permitting processing ability, and eliminate the backlog that impedes economic development and use of state land.

At the beginning of FY2011, there was a backlog of approximately 2,300 applications that had not been issued. This includes applications for permits (314), leases (297), easements (658), material sales (181), water rights (600), and instream flow reservation applications (330).

The current capacity to process all types of land and water use applications is 97 positions, of which 13 are unfunded and vacant. The personal services budget for the 84 filled positions is \$7,462.0.

This backlog of applications has been growing in recent years because the division has only been able to process 87% of all incoming applications. This is due to a number of reasons:

- Inefficient internal processes and cumbersome regulatory requirements.
- Land ownership patterns have become more complex, thereby increasing the conflicts that have to be resolved.
 - Increasing federal and municipal regulation has increased the processing time for applications.
 - Increasing appeals and litigation of our authorizations, which delay and complicate processing.
- An additional 8 million acres of land transferred to state ownership within the last five years, resulting in an increase in the number of applications to use that land.

The backlog of applications range in complexity from very basic authorizations such as a commercial recreation permit that can be issued within a day, to large projects requiring multiple interrelated authorizations, multi-agency coordination, required studies and review that may take a few years to complete the authorizations. Each specific application may present an assortment of obstacles that can vary the processing times such as land ownership disputes, multiple use conflicts, business transaction delays, unresponsive applicant, encumbrance removal, project revisions, appeals and litigation.

The following table shows the applications received, quantity issued, and the backlog for each of these types of authorizations in FY2010:

FY2010 Performance Measures

Authorization Type	Appl Rec'd	Qty Issued	Backlog
Land Use Permits	299	340	314
Land Leases	64	64	297
Easements	44	23	658
Material Sales	44	50	181
Water Rights	71	49	600

WORKPLAN

Goal: To timely process all incoming land and water use applications, and to eliminate the backlog.

Strategies:

- With the increased staffing, process 100% of all incoming applications (currently we can only process 87% of all incoming applications).
- The increased staffing, coupled with increased permitting efficiencies, will allow processing of at least 250 backlogged applications annually, with anticipated subsequent dramatic improvements through additional increased permitting efficiencies.
- The division will focus first on applications that foster economic and community development and improvement of state infrastructure, and provide opportunities for energy cost reduction, jobs, and contracts. Applications will be prioritized to work on projects that provide the most benefit to the highest number of Alaskans.
- The division will conduct a comprehensive review of the division's permitting processes, and we will find and implement changes that will increase efficiency. Areas that the division will evaluate include:
 - Organizational changes (e.g. formation of permitting teams) within the division.
 - Applicable statutes and regulations.
 - The regulatory relationship between the state, and federal and local governments.
 - Appeals process.
 - Contracting with the private sector.
- Develop computerized systems to automate and speed up the permitting process. The Department is developing a unified permitting system which will significantly increase permitting productivity by automating the permit processing, allow applicants to apply on line, and allow staff to better process and track applications.

This increment adds funding for six new Natural Resource positions and five existing unfunded positions.

Five new Natural Resource positions are needed to process and manage these backlogged authorizations: one in Fairbanks for Interior Alaska, one in Juneau for Southeast Alaska, and three in Anchorage for Southcentral Alaska. Substantial progress on applications critical for development projects will be realized in FY2012 and beyond. One new Natural Resource Specialist will be added in Southcentral to take care of the assignments, billing, and ongoing administration of the authorizations. This increment also funds three existing Natural Resources Specialist II positions (PCN 10-1380, 10-1859 and 10-8255) in the Southcentral Region Land Office under the Easement Unit that are vacant due to inadequate funding.

In addition, this amendment includes funding for an Administrative Assistant II (vacant PCN 10-1767), transferred from the Land Acquisition and Title Defense component. This position will support the division's administrative

Resource Development (continued) Mining and Land Development (continued)

FY2012 CC: Improve Efficiency of Land and Water Use Application Process (continued)

functions in the efforts to improve our efficiency. A Natural Resource Specialist III (PCN 10-1852) is transferred from the Land Sales and Municipal Entitlements component to concentrate more on general easement applications and easement management rather than just those for land sales.

This amendment also provides support costs for the positions including additional travel funding for inspections, compliance and monitoring of activities -- many of which are located in remote areas off the road system or in congested areas which requires field information to understand issues when considering competing or diverse types of application within the same general area. Inspections, compliance and monitoring require both travel costs and contractual expenses for helicopter and aircraft charters. The increment also includes funding for the additional office and parking garage lease space costs, core services costs (such as charge-backs to DOA for telecommunications, computer services and human resources support), equipment and supplies.

Summary of Positions -

Existing:

- 3 Natural Resource Specialist IIs (PCN 10-1380, 10-1859 and 10-8255)
- 1 Administrative Assistant II (Vacant PCN 10-1767, Transfer from Land Acquisition and Title Defense)
- 1 Natural Resource Specialist III (PCN 10-1852, Transfer from Land Sales and Municipal Entitlements)

Land Sales & Municipal Entitlements

FY2006 Land Surveyors for New Subdivision Land Sales Inc 195.8

The Land Sales and Contract Administration Section is requesting two new surveyors funded with Land Disposal Income Fund (LDIF) receipts beginning in FY06. The FY05 requirements for new subdivisions is to create 100 parcels in FY05, then to increase to 200 in FY06 and to 300 in FY07 and future years. There is a two-year time lag in the creation of subdivision parcels in order to get the subdivisions fully through the survey and platting process. In order to complete the 300-parcel requirement we need one surveyor for every four subdivision projects (four projects equal a total of approximately 100 parcels on average) meaning that two surveyors would be needed to complete 200 new parcels. We acquired one new surveyor beginning in FY05 and this one individual does not meet the future demand identified. The Department will be using nonpermanent employees until these two new surveyors can be hired as permanent positions. The two positions will be necessary to meet the goals for future years.

FY2012 Increase Personal Services Authority from Land Sales Capital Projects	IncM	400.0	400.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0

This increment budgets for CIP authorization being used for existing positions performing work related to Land Sales capital projects.

The CIP authorization requested for this increment comes from capital projects received over the last three years for survey and design work associated with land sales. Due to the high vacancy rate that has been maintained in the Land Sales section because of funding shortfalls, preparation work on additional subdivisions has not progressed at a rate that would allow these projects to mature to the point that lots could be offered for sale. In order to keep sufficient subdivision lots in the queue, it is necessary to budget CIP authorization for personal services costs to provide sufficient finding to continue to development of subdivision sales. These funds pay for positions performing area planning efforts necessary to designate lands for disposal, project design and survey

Land Acquisition & Title Defense FY2006 Personal Services from Bureau of Land Management (BLM) 2009 federally-funded capital project The BLM 2009 Conveyance Project will result in the state re					0.0	0.0	0.0	0.0	0.0	0	0	0

The BLM 2009 Conveyance Project will result in the state receiving approximately 10 -12 million acres still owed to the state under the Statehood Act. The project will also result in the transfer of over 8 million acres of federal land to Alaska Native Corporations formed under ANCSA. This funding is necessary so that the state can respond to and participate in this project. The state will need to review and respond to a significantly increased number of BLM conveyance decisions, decisions on easements and navigable waters, and requests for reconveyance of state land found to have been conveyed to the state in error. The state will also receive significantly more decisions to transfer land to the state under the remaining statehood entitlements and will need to process many additional title documents. The federal BLM has agreed to provide funding for the state's increased workload that results under this project.

This project provides the tools and the staff so that the state can participate in BLM's accelerated land transfer process. Over the past five years, DNR has received an average of 50,000 acres per year from the federal government. For the most part, high acreage, uncontested conveyances have been completed. What remains are smaller tracts that are subject to some type of encumbrance, withdrawal, or competing selections that are more difficult to adjudicate and resolve. Continuing the current method of processing multiple smaller conveyances, revisiting areas repeatedly as each small acreage gain is made is expensive and slow. It would

Resource Development (continued) Land Acquisition & Title Defense (continued)

FY2012 Oversight of Federal Land Transfers including Native Allotments, ANCSA Conveyances, and Survey Reviews (continued)

Regarding Native Allotments, the state is obligated to adjudicate for reconveyance 270 parcels of state land to the federal Bureau of Land Management (BLM) that were erroneously conveyed to the state. The state suspended work on these reconveyances in FY 11 because of funding shortfalls. Similarly, in past years the state has reviewed dozens of conveyances to ANCSA Corporations to ensure that public access is maintained to public lands.

Continued funding for positions to do this work will alleviate various inquiries from constituents, applicants, and other governmental agencies to legislators, the governor and commissioner by allowing the Division of Mining, Land and Water (MLW) to continue processing the Bureau of Land Management's native allotment reconveyance requests and requests election relinquishments of those areas affected by valid native allotment applications. Federal funding cuts for the BLM 2009 program, effective in FY10, effectively eliminated the ability to continue this work.

This component reviews approximately 386 ANCSA conveyance documents produces by the BLM. These documents affect access to public lands, land ownership patterns and future state entitlement selections. It is the responsibility of this component to make sure that actions taken by the BLM with regard to fulfilling the ANCSA land entitlement do not harm the state either by conveying lands to corporations where the state already holds title, restricting access across corporation lands to other public lands and that state in-holdings do not develop as part of incomplete adjudication at the BLM.

Another task that this increment will fund is continued work on setting the state's priorities for land conveyances and relinquishments. In the past 5 years, the state has received an additional 8 million acres from the federal government. An additional 5 million acres are owed the state, but the state has far more selections remaining. Under federal law the state is allowed a 25% over-selection. This increment will allow the state to continue to identify lands for conveyance and relinquishment. If the state fails to do this work, decisions about relinquishment will be made by the federal government, rather than the state.

This increment will also fund land survey reviews to ensure they are adequate under state statute for land conveyances made by DNR. The MLW Survey Section determines whether land surveys are adequate under the requirement of AS 38.04.045 for land conveyances made by DNR. Where surveys are required, the Unit issues instructions to private sector land surveyors. The Unit serves as the watchdog for BLM surveys to insure that they meet required standards, and protect state's interests in areas such as navigable waters and existing easements.

In FY06 the Water program adopted new fee regulations for water right applications. The new fees were based on "direct reasonable cost" as imposed by law. Since these fees have been in place we have not been able to collect all \$300,000 as originally envisioned by the legislature and have requested a fund change in the FY09 Governor's

FY2012 GF Replacement of Unrealizable Funds to Continue Permitting Water Use Applications	FndChg	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0

This change record requests fund changes to replace unrealizable receipts in the Water Component as follows:

Federal Receipts: \$28.5

In FY10, Water Development budgeted for \$46.0 in Federal, but only \$5.7 was collected and expended. This component received a small federal grant for \$30.1 in FY11. However, it is not anticipated that any additional federal grants will be received in FY12.

CIP Receipts: \$136.5

This component does not anticipate CIP Receipts for FY12 personal services costs. Current CIP projects

FY2012 GF Replacement of Unrealizable Funds to Continue Permitting Water Use

Applications (continued)

administered by this component are limited to those related to U.S. Geological and Survey pass through agreements.

General Fund Program Receipts: \$110.0

This component collects General Fund Program Receipts for water rights, water use, and dam safety application fees. This component has historically not collected these application fees at the levels previously estimated and GF is being requested to replace the estimated unrealizable portion of these receipts for FY12.

(Note: These fees were previously authorized as RSS, but this fund source was changed to GFPR in FY11

Filing for and receiving a water right permit is the only way that a land owner can legally obtain and protect a specified volume of water for domestic or industrial purposes. Without this permit use of water cannot be protected from other users of the same water source.

Without a temporary water right permit an organization cannot use a significant amount of water from a surface or ground source or face penalties under AS 46.15.180. Violation of this statute could lead to loss of a mineral exploration permit which would halt exploration activity. Loss of an exploration permit could halt or significantly delay a mining, power or construction project. Delays in exploration activities have potential to shelve projects that are economically advantageous to the state and surrounding communities.

If these fund switches are not approved, the component will be forced to hold vacancies open to stay within the budget. However, workloads continue to grow and lack of available funds to fill positions impacts services to the public which includes a growing backlog of water rights and other permit applications. If unrealizable fund sources are not replaced, this component will not have sufficient funds available to fill vacancies and address backlogs in FY12.

Federal, \$0.4

In FY10, Water Development budgeted for \$46.0 in Federal, but only \$5.7 was collected and expended. It is not anticipated that any additional federal funds will be collected in FY12 and any additional federal authority would be unrealized. The component is requesting a decrement of \$28.5 in federal funds as part of the FY12 Governor's budget.

GF Program Receipts (GF/PR), \$15.2

The component has historically budgeted GF/PR (formerly RSS) to accommodate small dam safety applications and water use permits that have been received. In FY10, the component budgeted \$310.3 for these activities, but only \$231.9 was collected and expended. It is not anticipated that any additional GF/PR authority will be realizable.

The Division of Mining, Land and Water (DMLW) requests \$	100.0 to p	ay cost recovery f	ees to the Bureau	ı of Land								
Management (BLM) associated with the filing of 20 Recorda	able Disclai	mer of Interest (R	RDI) applications.	These								
				ar .								

RDIs provide certainty of state ownership of lands under navigable waters, thus eliminates many access conflicts and restrictions claimed by others. Alaskans need to be able to use the lands that were granted at statehood.

Each RDI application DMLW files costs about \$5,000 to cover BLM cost of adjudicating the applications. DMLW

Each RDI application DMLW files costs about \$5,000 to cover BLM cost of adjudicating the applications. DMLW expects to submit 20 applications in FY2012 because of the data available from the navigability reports that will be complete by the end of FY2011. The funding in this component is not sufficient to cover this quantity of RDI submissions.

Filing this quantity of RDIs is the culmination and result of a multi-year research effort primarily funded by the BLM. The BLM funded DMLW to conduct research and write navigability reports. Although the purpose of these reports was to provide information of what water bodies are deemed navigable by BLM, necessary for their land management decisions, the state benefits from having access to this historical research necessary to file RDIs. Using these reports as the navigability evidence to support the RDI applications significantly reduces the costs charged by BLM for processing RDIs because BLM staff does not have to provide additional scrutiny of something they have already approved.

DMLW has made commitments to the Legislature that we would file an increased number of RDI applications when the BLM navigability reports are completed. Multiple reports are now being completed, thus DMLW is poised to submit a series of applications, about two per month, if the filing fee funds are available. Having a good quantity of RDI applications should also help BLM justify keeping the RDI program staffed and operational, which benefits the state in reducing costs of clearing the cloud on the title of lands under navigable waters.

The state received ownership of all the lands under navigable waters at statehood under the Equal Footing Doctrine and the Submerged Lands Act. The boundaries to that ownership are not identified in any conveyance document, but many federal conveyances erroneously purport to convey these lands to entities other than the state. The federal government had the responsibility to hold these lands under navigable waters in trust for the future state of Alaska up until statehood. Therefore there has been continuous confusion over the ownership of these lands and there have been many conflicting navigability determinations. In order to clear up the confusion, the state has to prove that the navigable water is navigable in fact, or susceptible to trade, travel or commerce. This is possible to do through a quiet title action, but prohibitively expensive due to the number of navigable water bodies in the state. Each quiet title action will likely cost more than \$1 million. DMLW has worked out an administrative process with BLM to quiet title of the lands under navigable inland waters. This process allows BLM to administratively review the supporting facts and disclaim any federal interest in ownership.

It is highly unlikely, due to the significant cost of a quiet title that another entity would choose to file a quiet title action against the state once the federal government disclaims its interest.
